#### Introduction

This manual describes how to connect the display (GP3000 series) and the External Device (target PLC).

In this manual, the connection procedure will be described by following the below sections:

# 1 System Configuration

The system configuration in the case when the External Device of Mitsubishi Electric Corp. and the display are connected is shown.

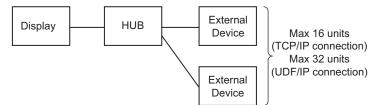

| Series             | CPU                       | Link I/F             | SIO Type                       | Setting Example                |
|--------------------|---------------------------|----------------------|--------------------------------|--------------------------------|
|                    |                           | QJ71E71              | Ethernet<br>(UDP)              | Setting Example 1<br>(page 6)  |

GP3000 Series User Manual "4.3.6 System Area Setting"</li> </ul> |  |
| Port            | Select the port of the display to be connected to the External Device from "Ethernet (UDP)" and "Ethernet (TCP)".   |  |

# 3 Example of Communication Setting

Examples of communication settings of the display and the External Device, recommended by Pro-face, are shown.

When you use the MELSEC Q/QnA Ethernet Series, use GP-Pro EX and the ladder software to set as below.

# 3.1 Setting Example 1

### Setting of GP-Pro EX

Communication Settings

To display the setting screen, select [Device/PLC Settings] from [System setting window] in workspace.

| Device/PLC1                             |   |                              |
|---|---|------------------------------|
| Summary                                 |   | Change Device/PLC            |
| Maker Mitsubishi Electric Corporation   | Series Q/QnA Series Ethernet                          | Port Ethernet (UDP)          |

| Data items for acce | essing other station  |
| Network No.         | 0                     |
| PC No.              | 255 📫                 |
| Request destinat    | tion module           |
| 1/0 No.             | 1023 ÷                |
| Station No.         | 0 📫                   |
|                     |                       |
|                     | Default               |
|                     | DK ( <u>D)</u> Cancel |

#### Notes

- Check with a network administrator about IP address. Do not set the duplicate IP address.
- Set IP address on the External Device for IP address in Device-specific settings.
- You need to set IP address on the display in the off-line mode of the display.
- Limitations when you use UDP/IP to access the multiple PLCs via network are shown below.
  - When you set the retry frequency to zero, the error message of "Response timed out for initial communication command" is displayed at startup.
  - At startup, you cannot read the device data until timeout time elapses once.

# Setting of External Device

Perform the settings of External Device in "Network Parameter" of the Parameter Settings of the ladder software.

#### Network Parameter MNET/10H Ethernet Settings

| Setup Items  | Settings |
|--------------|----------|
| Network Type | Ethernet |
| Head I/O No. | Option   |
| Network No.  | Option   |
| Group No.    | Option   |
| Station No.  | Option   |
| Mode         | On-line  |

#### Ethernet Operation Settings

| Setup Items                         | Settings                  |
|-------------------------------------|---------------------------|
| Communication Data Code<br>Settings | Binary code communication |
| Initial Timing Settings             | Always wait for OPEN      |
| IP Address Setting                  | Option                    |
| Send Frame Settings                 | Ethernet (V2.0)           |
| TCP Living Confirmation<br>Settings | Option                    |
| Enable Write during RUN             | Enable                    |

#### ♦ Open Settings

| Setup Items                         | Settings               |
|-------------------------------------|------------------------|
| Protocol                            | UDP                    |
| Open Method                         | Unused                 |
| Source Port No.                     | Option <sup>*1</sup>   |
| Destination IP Address              | Option <sup>*1*2</sup> |
| Destination Port Number             | Option <sup>*1*2</sup> |
| Fixed Buffer                        | Option                 |
| Update Procedure of Fixed<br>Buffer | Option                 |
| Pairing Opening                     | Option                 |
| Living Confirmation                 | Option                 |

\*1 Check with a network administrator about setting value.

\*2 Adjust to the setting on Display.

#### ♦ Other Settings

The following settings are items only if necessary.

- Initial Settings Settings related to timer for TCP connection. Basically, communication is available with default settings. Change the settings when you want to customize (such as shortening timeout).
- Routing Information Set only when you use subnet mask or router.
- Auto Open UDP Port When you use the UDP port, you can communicate using the auto open UDP port (port No. 5000) on the PLC.

#### Notes

Check with a network administrator about IP address. Do not set the duplicate IP address.

## 3.2 Setting Example 2

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, select [Device/PLC Settings] from [System setting window] in workspace.

- Auto Open UDP Port When you use the UDP port, you can communicate using the auto open UDP port (port No. 5000) on the PLC.

#### Notes

Check with a network administrator about IP address. Do not set the duplicate IP address.

## 3.3 Setting Example 3

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, select [Device/PLC Settings] from [System setting window] in workspace.

| Device/PLC1                            |                                    |                                      |

|                     | )K ( <u>D)</u> | Cance    | 1    |

#### Notes

- Check with a network administrator about IP address. Do not set the duplicate IP address.
- Set IP address on the External Device for IP address in Device-specific settings.
- You need to set IP address on the display in the off-line mode of the display.
- Limitations when you use UDP/IP to access the multiple PLCs via network are shown below.
  - When you set the retry frequency to zero, the error message of "Response timed out for initial communication command" is displayed at startup.
  - At startup, you cannot read the device data until timeout time elapses once.

## Setting of External Device

You need the DIP switch settings and the ladder program for the setting of External Device.

#### Switch Settings

Mode Setting Switch

| Se | ettings | Setup Items  |
|----|---------|--|
|    | 0       | On-line (Contraction of the second se |

Communication Condition Setting Switch

| DIP<br>Switch | Settings | Setup Items                                       |
|---------------|----------|---|
| SW1           | OFF      | Selection of line processing at TCP timeout error |
| SW2           | OFF      | Data Code Setting                                 |
| SW3           | OFF      | Operate along Y19                                 |
| SW4           | OFF      | Disable (Fixed to OFF)                            |
| SW5           | OFF      | Disable (Fixed to OFF)                            |
| SW6           | OFF      | Disable (Fixed to OFF)                            |
| SW7           | ON       | CPU Communication Timing Settings                 |
| SW8           | OFF      | Initial Timing Settings                           |

#### Example of Ladder Program

Example when you communicate with the auto open UDP port No. (Default: 5000) is shown below.

- IP address of External Device: 192.168.0.1
- Port No. of External Device: 5000

| SM402 (1 scan only after RUN) | (Initial command)<br>— — — — [ PLS MO] Initial trigger processing   |
|-------------------------------|---|
| MO X1F (WDT error detected)   |   |
|                               | [DMOVP HC0A80001 D1000]IP address of PLC<br>[DT0 H0 H0 D1000 K1]Copy to buffer memory<br>[SET Y19]Initial request<br>—————— [END] |

Above sample is the minimum ladder to enable UDP communication with Display. Please refer to the manual of External Device for more information about error processing and TCP communication, etc.

<sup>•</sup> You do not need to specify the IP address and the port No. on the PLC for communication with this function.

# 3.4 Setting Example 4

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, select [Device/PLC Settings] from [System setting window] in workspace.

| Device/PLC1                               |  |                               |

#### Notes

- Check with a network administrator about IP address. Do not set the duplicate IP address.
- Set IP address on the External Device for IP address in Device-specific settings.
- You need to set IP address on the display in the off-line mode of the display.

## Settings of External Device

You need the DIP switch settings and the ladder program for the setting of External Device.

#### Switch Settings

#### Mode Setting Switch

| Settings | Setup Items |
|----------|-------------|
| 0        | On-line     |

#### Communication Condition Setting Switch

| DIP<br>Switch | Settings | Setup Items                                       |
|---------------|----------|---|
| SW1           | OFF      | Selection of line processing at TCP timeout error |
| SW2           | OFF      | Data Code Setting                                 |
| SW3           | OFF      | Operate along Y19                                 |
| SW4           | OFF      | Disable (Fixed to OFF)                            |
| SW5           | OFF      | Disable (Fixed to OFF)                            |
| SW6           | OFF      | Disable (Fixed to OFF)                            |
| SW7           | ON       | CPU Communication Timing Settings                 |
| SW8           | OFF      | Initial Timing Settings                           |

#### Example of Ladder Program

Example when you communicate with the auto open UDP port No. (Default: 5000) is shown below.

- IP address of External Device: 192.168.0.1
- Port No. of External Device: 5000

| SM402 (1 scan only after RUN) | (Initial command)<br>— — — — — [PLS MO] Initial trigger processing   |
|-------------------------------|--|
| MO X1F (WDT error detected)   |  |
|                               | [DMOVP HC0A80001 D1000] IP address of PLC<br>[DT0 H0 H0 D1000 K1] Copy to buffer memory<br>[SET Y19] Initial request<br>—————— [END] |

Above sample is the minimum ladder to enable UDP communication with AGP. Please refer to the manual of External Device for more information about error processing and TCP communication, etc.

<sup>•</sup> You do not need to specify the IP address and the port No. on the PLC for communication with this function.

# 4 Setup Items

Set communication settings of the display with GP-Pro Ex or in off-line mode of the display.

The setting of each parameter must be identical to that of External Device.

"3 Example of Communication Setting" (page 6)

 IMPORTANT
 • You need to set IP address on the display in the off-line mode of the display.

 Cf.
 GP3000 Series User Manual "4.3.7 Ethernet Settings"

| Network No. | Set PC No. when you communicate via network. Use an integer from 0 to 239 to enter network No. of the External Device to communicate. If you do not communicate via network, enter 0.   |
| PC No.      | Set PC No. when you communicate via network. Use an integer from 0 to 64 to enter PC No. of the External Device to communicate. If you do not communicate via network, enter 255.   |
| Data Code   | Select the data format to communicate with the External Device from "Binary code communication" or "ASCII code communication".  |
| I/O No.     | Set PC No. when you communicate via network. Use an integer from 0 to 511 to enter I/O No. of the External Device to communicate. If you do not communicate via network, enter 1023.  |
| Station No. | Enter a station number of the External Device, using 0 to 31.   |

# 4.2 Setup Items in Off-Line Mode

• Please refer to GP3000 Series User Manual for more information on how to enter off-line mode or about operation.

Cf. GP3000 Series User Manual "Chapter 4 Setting"

#### Communication Settings

To display the setting screen, touch [Device/PLC Settings] from [Peripheral Settings] in off-line mode. Touch the External Device you want to set from the displayed list.

| Comm.          | Device                                  |         |                         |                        |
