## Introduction

This manual describes how to connect the Display and the External Device (target PLC).

In this manual, the connection procedure will be described by following the below sections:

# 1 System Configuration

The system configuration in the case when the External Device and the Display are connected is shown.

**NOTE**

- When the time of GP4000 series is automatically updated in [Clock Update Settings] of GP-Pro EX, there are some restrictions as shown below.

For details on [Clock Update Settings], refer to GP-Pro EX Reference Manual.

- FX0S, FX0N and FX1 does not support automatic update of the time. Specify [Customize] in [Clock Update Settings].
- When the time is automatically updated in FX2, FX2C and FX2NC, the real time clock function board or the E2PROM memory with the real time clock function is required.

## ■ IPC COM Port

When connecting IPC with an External Device, the COM port used depends on the series and SIO type. Please refer to the IPC manual for details.

\*1 The RI/5V can be switched. Use the IPC's switch to change if necessary.

\*2 Set up the SIO type with the DIP Switch. Please set up as follows according to SIO type to be used.

- \*3 When making communication between an External Device and COM port on the Expansion slot, only RS-232C is supported. However, ER (DTR/CTS) control cannot be executed because of the specification of COM port.  
For connection with External Device, use user-created cables and disable Pin Nos. 1, 4, 6 and 9. Please refer to the IPC manual for details of pin layout.
- \*4 Set up the SIO type with the BIOS. Please refer to the IPC manual for details of BIOS.
- \*5 When setting up communication between an External Device and the RS-232C/422/485 interface module, use the IPC (RS-232C) or PS5000 (RS-422/485) cable diagrams. However, when using PFXZPBMPR42P2 in a RS-422/485 (4-wire) configuration with no flow control, connect 7.RTS+ and 8.CTS+, and connect 6.RTS- and 9.CTS-.  
When using RS-422/485 communication with External Devices, you may need to reduce the transmission speed and increase the TX Wait time.
- \*6 To use RS-422/485 communication on the RS-232C/422/485 interface module, the DIP Switch setting is required. Please refer to "Knowledge Base" (FAQs) on the support site. (<http://www.pro-face.com/trans/en/manual/1001.html>)

Settings	FAQ ID
PFXZPBMPR42P2, RS422/485 change method	FA263858
PFXZPBMPR42P2 termination resistor setting	FA263974
PFXZPBMPR44P2, RS422/485 change method	FA264087
PFXZPBMPR44P2 termination resistor setting	FA264088

- \*7 Set up the SIO type with the DIP Switch. Please refer to the IPC manual for details of DIP Switch. The BOX Atom has not a switch to set the RS-232C, RS-422/485 mode. Use the BIOS for the setting.
- \*8 For the connection with the External Device, on the user-created cable read as if the connector on the Display-side is a M12 A-coding 8 pin socket. The pin assignment is the same as described in the cable diagram. For the M12 A-coding connector, use PFXZPSCNM122.
- \*9 In addition to COM1, you can also use the COM port on the optional interface.
- \*10 Install the optional interface in the expansion slot.

## DIP Switch settings (PL3000 / PS3000 Series)

### RS-232C

DIP Switch	Setting	Description
1	OFF*1	Reserved (always OFF)
2	OFF	SIO type: RS-232C

## 2 Selection of External Device

Select the External Device to be connected to the Display.

Setup Items	Setup Description
Number of Devices/PLCs	Enter an integer from 1 to 4 to define the number of Devices/PLCs to connect to the display.
Manufacturer	Select the manufacturer of the External Device to connect. Select "Mitsubishi Electric Corporation".
Series	Select the External Device model (series) and the connection method. Select "FX Series CPU Direct". In System configuration, make sure the External Device you are connecting is supported by "FX Series CPU Direct". ☞ "1 System Configuration" (page 3)
Port	Select the Display port to connect to the External Device.
Use System Area	Check this option to synchronize the system data area of the Display and the device (memory) of the External Device. When synchronized, you can use the External Device's ladder program to switch the display or display the window on the Display. Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)" This feature can also be set in GP-Pro EX or in the Display's offline mode. Cf. GP-Pro EX Reference Manual "System Settings [Display Unit] - [System Area] Settings Guide" Cf. Maintenance/Troubleshooting Guide "Main Unit - System Area Settings"

## 3 Example of Communication Setting

Examples of communication settings of the Display and the External Device, recommended by Pro-face, are shown.

### 3.1 Setting Example 1

#### ■ Setting of GP-Pro EX

#### ◆ Communication Settings

To display the setup screen, from the [Project] menu, point to [System Settings] and select [Device/PLC].

### ■ Setting of External Device

When the link I/F you use is the CPU Direct type, setting of External Device is not necessary. When you use a function extension board and a communication adapter, make the settings as shown below.

- 1 Uncheck the checkbox for [Operate communication setting] in [PLC system (2)] of Mitsubishi's GP-Developer.
- 2 Store data "0" in D8120 and between D8173 and D8180. Then, set M8070 and M8071 to OFF.

When using Channel 2 for FX3U, FX3UC-32MT-LT(-2), FX3G or FX3GC, store data "0" in D8420 instead of D8120. When using Channel 1, store data "0" in D8120.

Wait To Send	Use an integer from 0 to 255 to enter standby time (ms) for the Display from receiving packets to transmitting next commands.
Adapter	Select "Direct" or "2 Port " for the adapter to be used. When using 2-port adapter II, select "2 Port".
RI/VCC	You can switch RI/VCC of the 9th pin when you select RS232C for SIO type. It is necessary to change RI/5V by changeover switch of IPC when connect with IPC. Please refer to the manual of the IPC for more detail.

**NOTE**

- Refer to the GP-Pro EX Reference Manual for Indirect Device.  
Cf. GP-Pro EX Reference Manual "Changing the Device/PLC at Runtime (Indirect Device)"

## ■ Device Setting

To display the [Individual Device Settings] dialog box, from [Device-Specific Settings] in the [Device/PLC] window, select the external device and click [Settings] .

Setup Items	Setup Description
Other bits in this word	Select "Clear" or "Do not clear" for the handling of other bit data in the same word when a bit operation is performed to a bit specified word address.

## 4.2 Setup Items in Offline Mode

- NOTE** • Refer to the Maintenance/Troubleshooting guide for information on how to enter offline mode or about the operation.

Cf. Maintenance/Troubleshooting Guide "Offline Mode"

- The number of the setup items to be displayed for 1 page in the offline mode depends on the Display in use. Please refer to the Reference manual for details.

### ■ Communication Settings

To display the setting screen, touch [Device/PLC Settings] from [Peripheral Settings] in offline mode. Touch the External Device you want to set from the displayed list.

## 5 Cable Diagram

The following cable diagrams may be different from cable diagrams recommended by External Device Manufacturer.

Please be assured there is no operational problem in applying the cable diagram shown in this manual.

- The FG pin of the External Device body must be grounded according to your country’s applicable standard. Refer to your External Device manual for details.
- SG and FG are connected inside the Display. When connecting the External Device to SG, design your system to avoid short-circuit loops.
- Connect an isolation unit if the communication is not stable due to noise or other factors.

## 6 Supported Device

Range of supported device address is shown in the table below. Please note that the actually supported range of the devices varies depending on the External Device to be used. Please check the actual range in the manual of your External Device.

### 6.1 When using FX1

     This address can be specified as system data area.

Device	Bit Address	Word Address	32bits	Notes
Input Relay	X000 - X167	X000 - X160	[L/H]	<span style="border: 1px solid black; padding: 2px;">OCT 8</span> *1 *2 *3
Output Relay	Y000 - Y167	Y000 - Y160		<span style="border: 1px solid black; padding: 2px;">OCT 8</span> *2
Internal Relay	M0000 - M1023	M0000 - M1008		<span style="border: 1px solid black; padding: 2px;">+16</span>
Special Auxiliary Relay	M8000 - M8255	M8000 - M8240		<span style="border: 1px solid black; padding: 2px;">+16</span> *4
State	S0000 - S0999	S0000 - S0992		<span style="border: 1px solid black; padding: 2px;">+16</span> *5
Timer (Contact)	TS000 - TS245	-----

Special Data Register	-----	D8000 - D8069		<span style="border: 1px solid black; padding: 2px;">Bit F</span> *4 *7

\*1 Includes an area in which you cannot write.

\*2 Specify word address only for the divisible value by 20oct. (Example: X0, X20, X40..., X160)

\*3 Writing cannot be made to the address, where Input Terminals are allocated on External Device, from Display.

\*4 Special area. This area may be used by the system, and includes an area in which you cannot write. Please refer to the manual attached to the External Device for more detail.

\*5 When the specified word address is outside the device's supported range, you cannot write to the specified word address. If you read a word address from a device that exceeds the supported range, only bits within the supported range are read. In the readout, 0 is assigned to the bits outside the range.

\*6 32-bit device.

- \*7 The access method when specifying bits is different depending on the setting of "Other bits in this word" in "Individual Device Settings".

[Clear]..... 

[Do not clear] ..... When bits are written, the Display reads the corresponding word address from the External Device, sets particular bits of that word address to ON, and then returns the resulting address to the External Device. Note that the data may not be written correctly if you write to the word address using the ladder program while the Display is reading data from, and writing data to, the External Device.

- \*1 Includes an area in which you cannot write.
- \*2 Specify word address only for the divisible value by 20oct. (Example: X0, X20, X40..., X360)
- \*3 Writing cannot be made to the address, where Input Terminals are allocated on External Device, from Display.
- \*4 Special area. This area may be used by the system, and includes an area in which you cannot write. Please refer to the manual attached to the External Device for more detail.
- \*5 When the specified word address is outside the device's supported range, you cannot write to the specified word address. If you read a word address from a device that exceeds the supported range, only bits within the supported range are read. In the readout, 0 is assigned to the bits outside the range.
- \*6 32-bit device.
- \*7 You cannot use the data register D7999 as the 32-bit address device. This is because D8000 which is HIGH of the 32-bit device is handled as a different device.
- \*8 The access method when specifying bits is different depending on the setting of "Other bits in this word" in "Individual Device Settings".

[Clear]..... Bit F

[Do not clear] ..... When bits are written, the Display reads the corresponding word address from the External Device, sets particular bits of that word address to ON, and then returns the resulting address to the External Device. Note that the data may not be written correctly if you write to the word address using the ladder program while the Display is reading data from, and writing data to, the External Device.

## 7 Device Code and Address Code

Use device code and address code when you select "Device Type & Address" for the address type in data displays.

Device	Device Name	Device Code (HEX)	Address Code
Input Relay	X	0080	Value of word address divided by 0x10
Output Relay	Y	0081	Value of word address divided by 0x10
Internal Relay	M	0082	Value of word address divided by 16
Special Auxiliary Relay	M8	0083	Value of word address divided by 16
State	S	0087	Word Address
Timer (Current Value)	TN	0060	Word Address
Counter (Current Value)	CN	0061	Word Address
Counter (Current Value) *1	CN	0062	Word Address
Data Register	D	0000	Word Address
Special Data Register	D8	0001	Word Address
Extension Register *2	R	000F	Word Address

\*1 32-bit device.

\*2 Supported only by FX3U, FX3UC-32MT-LT(-2) and FX3G.

## 8 Error Messages

Error messages are displayed on the Display screen as follows: "No.: Device Name: Error Message (Error Occurrence Area)". Each description is shown below.

Item	Description
No.	Error No.
Device Name	Name of the External Device where error occurs. Device name is a title of the External Device set with GP-Pro EX. (Initial value [PLC1])
Error Message	Displays messages related to the error which occurs.
Error Occurrence Area	<p>Displays IP address or device address of the External Device where error occurs, or error codes received from the External Device.</p> <p><b>NOTE</b></p> <ul style="list-style-type: none"> <li>• IP address is displayed such as "IP address(Decimal): MAC address( Hex)".</li> <li>• Device address is displayed such as "Address: Device address".</li> <li>• Received error codes are displayed such as "Decimal[Hex]".</li> </ul>

Display Examples of Error Messages

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 2 [02H])"

- 
- NOTE** • Refer to "Display-related errors" in "Maintenance/Troubleshooting Guide" for details on the error messages common to the driver.
