Introduction

This manual describes how to connect the Display and the External Device (target PLC).

In this manual, the connection procedure is described in the sections identified below:

1 System Configuration

The following table lists system configurations for connecting a MODBUS-compatible External Device and the Display.

Series	CPU	Link I/F	SIO Type	Setting Example	Cable Diagrams
	NX-D1500000 NX-D2500000 NX-D3500000	RS-485 communication terminal on the base	RS-422/485 (2 wire)	Setting Example 1 (page 8)	Cable Diagram 1 (page 17)
NX Series		RS-485 communication terminal on NX-CB1	RS-422/485 (2 wire)	Setting Example 1 (page 8)	Cable Diagram 1 (page 17)
		RS-232C connector on CMC10L	RS-232C	Setting Example 2 (page 10)	Cable Diagram 2 (page 27)

■ IPC COM Port

When connecting IPC with an External Device, the COM port used depends on the series and SIO type. Please refer to the IPC manual for details.

*1 The RI/5V can be switched. Use the IPC's switch to change if necessary.

*2 Set up the SIO type with the DIP Switch. Please set up as follows according to SIO type to be used.

*3 When making communication between an External Device and COM port on the Expansion slot, only RS-232C is supported. However, ER (DTR/CTS) control cannot be executed because of the specification of COM port.
For connection with External Device, use user-created cables and disable Pin Nos. 1.4, 6 and 9.

For connection with External Device, use user-created cables and disable Pin Nos. 1, 4, 6 and 9. Please refer to the IPC manual for details of pin layout.

5 Cable Diagrams

The following cable diagrams may be different from cable diagrams recommended by Yamatake Corporation. Please be assured there is no operational problem in applying the cable diagrams shown in this manual.

- The FG pin of the External Device body must be grounded according to your country's applicable standard. Refer to your External Device manual for details.
- SG and FG are connected inside the Display. When connecting the External Device to SG, design your system to avoid short-circuit loops.
- Connect an isolation unit if the communication is not stable due to noise or other factors.

6 Supported Devices

The following table shows the range of supported device addresses. Please note that the actual supported range of the devices varies depending on the External Device to be used. Please check the actual range in the manual of your External Device.

Enter the External Device address in the dialog box below.

💰 Input Address	s		2	K

Enter the address.

: This address can be specified as system data area.

Device	Bit Address	Word Address	32 bits	Remarks
Data	04096.00 - 36678.15	04096 - 36678	[L/H]	*1 *2

- *1 When you write to the bit address, the Display reads the entire word, sets the defined bit, then returns the new word value to the External Device. If the External Device writes data to this word address during the bit write process, the resulting data may be incorrect.
- *2 If the address is out of the system area, an error occurs.

NOTE	• There are read-only addresses. Refer to your External Device manual on precautions when
	reading and writing to device addresses.
	• You can only set the Read Area Size for the system area available to use in the External
	Device. Please refer to the GP-Pro EX Reference Manual for Read Area Size.
	Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)"
	• Refer to the precautions on manual notation for icons in the table.
	"Manual Symbols and Terminology"
	• When you use a non-existent address, a read error may not display. In this case, "0" is returned

as the read data. Note, however, that write errors are displayed.

7 Device Code and Address Code

Use device code and address code when you set "Device Type & Address" for the address type of the data display or other devices.

Device	Device Name	Device Code (HEX)	Address Code
Data	-	0000	Word Address

8 Error Messages

Error messages are displayed on the screen of the Display as follows: "No.: Device Name: Error Message (Error Occurrence Area)". Each description is shown below.

Item Description			
No.	Error number.		
Device Name	Name of the External Device where an error has occurred. Device/PLC name is the title of the External Device set with GP-Pro EX. (Initial value [PLC1])		
Error Message	Displays messages related to an error that has occurred.		
	Displays the IP address or device address of the External Device where an error has occurred, or error codes received from the External Device.		
Error Occurrence Area	 NOTE IP addresses are displayed as "IP address (Decimal): MAC address (Hex)". Device addresses are displayed as "Address: Device address". Received error codes are displayed as "Decimal [Hex]". 		

Example of an Error Message

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 2[02H])"

NOTE	Refer to your External Device manual for details on received error codes.
	Refer to "Display-related errors" in "Maintenance/Troubleshooting Guide" for details on the
	error messages common to the driver.

Error Codes Unique to External Device

Error Code (HEX)	Description
01	Does not support the corresponding Function Code.
02	The specified data address does not exist.
03	Data value error.
