#### Introduction

This manual describes how to connect the Display and the External Device.

In this manual, the connection procedure will be described by following the below sections:

1	System Configuration This section shows the types of External Devices which can be connected and SIO type.	"1 System Configuration" (page 3)
	•	
2	Selection of External Device Select a model (series) of the External Device to be connected and connection method.	"2 Selection of External Device" (page 9)
	•	
3	Example of Communication Settings This section shows setting examples for communicating between the Display and the External Device.	"3 Example of Communication Setting" (page 10)
4	Setup Items This section describes communication setup items on the Display. Set communication settings of the Display with GP-Pro EX or in offline mode.	<sup>ক্টে~</sup> "4 Setup Items" (page 18)
5	Cable Diagram This section shows cables and adapters for connecting the Display and the External Device.	"5 Cable Diagram" (page 27)
	Operation	

# 1 System Configuration

The system configuration in the case when the External Device and the Display are connected is shown.

NOTE

• When using this driver at a communication speed of 38400 or more, there are the following limitations as listed below.

- The DH-485 driver of Rockwell Automation, Inc. cannot be used simultaneously.
- SIMATIC S7 MPI direct driver of Siemens AG cannot be used simultaneously.
- This driver (communication speed: 38400 or more) cannot be used with both COM1 and COM2.
- When this driver is used, the execution time of the logic function in the Display may be longer.
- Connection example 1:1

• Connection example n:1

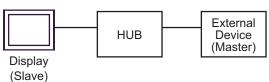

- \*1 The number of Displays (Slaves) you can connect depends on the External Device. Check the specifications of the External Device.
- When LT-4\*01TM is included in the connection configuration, Polarization resistance of the LT-4\*01TM is set to stabilize a signal level in the communication line. (Polarization resistance is different from terminal resistance.)
  - When one LT-4\*01TM is used, set "560" (default).
  - When two or more LT-4\*01TMs are used, set "560" (default) for one of the LT-4\*01TM and set "None" for the other.
  - Polarization resistance can be set in offline mode only. To display the setup screen, touch [Device/ PLC Adjust] of the [Peripheral Settings] tab in the offline mode.

#### ◆ Ethernet (TCP)

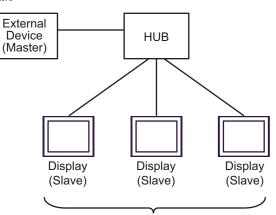

NOTE

• When the execution time of the logic function in the Display is long, a response from a master device to a request may be delayed. Adjust the time-out time of the master device when access is made from two or more master devices simultaneously.

• Connection example 1:1

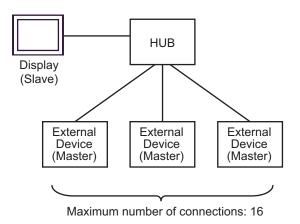

• Connection example n:1

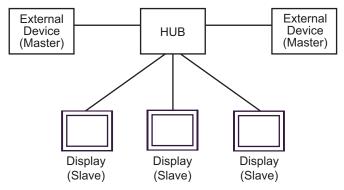

Maximum number of connections: n\*1

- \*1 The number of Displays (Slaves) you can connect depends on the External Device. Check the specifications of the External Device.
- Connection example 1:m

• Connection example n:m

You can connect maximum 16 units of External Device (Master). Note that there is no communication between the Displays (Slaves).

### ■ IPC COM Port

When connecting IPC with an External Device, the COM port used depends on the series and SIO type. Please refer to the IPC manual for details.

\*1 The RI/5V can be switched. Use the IPC's switch to change if necessary.

\*2 Set up the SIO type with the DIP Switch. Please set up as follows according to SIO type to be used.

\*3 When making communication between an External Device and COM port on the Expansion slot, only RS-232C is supported. However, ER (DTR/CTS) control cannot be executed because of the specification of COM port.
Expression with External Device, use user areated explase and dischla Bin Nas. 1, 4, 6 and 0.

For connection with External Device, use user-created cables and disable Pin Nos. 1, 4, 6 and 9. Please refer to the IPC manual for details of pin layout.

Port No.	Use an integer "502" or from "1024 to 65535" to enter the port No. of the Display.		
Wait To Send	Use an integer from "0 to 255" to enter standby time (ms) for the Display from receiving packets to transmitting next commands.		
Unit ID	Use an integer from "1 to 247" or "255" to enter the slave address.		

#### Device Setting

To display the setting screen, touch [Device/PLC Settings] from [Peripheral Settings]. Touch the External Device you want to set from the displayed list, and touch [Device Settings].

DWord Word Order	Displays the order in which double word data is stored.	

# 5 Cable Diagram

The following cable diagrams may be different from cable diagrams recommended by External Device Manufacturer.

Please be assured there is no operational problem in applying the cable diagram shown in this manual.

- The FG pin of the External Device body must be grounded according to your country's applicable standard. Refer to your External Device manual for details.
- SG and FG are connected inside the Display. When connecting the External Device to SG, design your system to avoid short-circuit loops.
- Connect an isolation unit if the communication is not stable due to noise or other factors.

## 6 Supported Device

Range of supported device address is shown in the table below. Please note that the actually supported range of the devices varies depending on the External Device to be used. Please check the actual range in the manual of your External Device.

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bits	Remarks
Coil	000001-008192	000001-008177		÷16+
Discrete Input	100001-108192	100001-108177		<u>+16+</u> *2

### IEC61131 Syntax Address Description

The following is a corresponding table for IEC61131 syntax and MODBUS syntax address descriptions.

	MODBUS Syntax			IEC61131 Syntax				
Device	NIC.	0000 Oyi	nax	0-based			1-based	
201100	Format Range First Format Range	First element	Range	First element				
Coil	000001+ i	i = 0 to 8191	000001	%Mi	i = 0 to 8191	%M00000	i = 1 to 8192	%M00001
Discrete Input	100001+ i	i = 0 to 8191	100001	-	-	-	-	-
Input Register (Word)	300001+ i	i = 0 to 9999	300001	-	-	-	-	-
Input Register (Word bit)	300001+ i, j	i = 0 to 9999 j = 0 to 15	300001,0 0	-	-	-	-	-
Holding Register (Word)	400001+ i	i = 0 to 9999	400001	%MWi	i = 0 to 9999	%MW00000	i = 1 to 10000	%MW00001
Holding Register (Word bit)	400001+ i, j	i = 0 to 9999 j = 0 to 15	400001,0 0	%MWi: Xj	i = 0 to 9999 j = 0 to 15	%MW00000 :X00	i = 1  to 10000 j = 0  to  15	%MW00001 :X00

**NOTE** • The addresses 100000 and 300000 cannot be accessed using IEC61131 syntax.

• If you apply IEC61131 syntax to a project which has a discrete input or input register already set, the addresses become "-Undefined-".

NOTE

• Please refer to the GP-Pro EX Reference Manual for system data area.

Cf. GP-Pro EXReference Manual "LS Area (Direct Access Method Area)"

• Please refer to the precautions on manual notation for icons in the table.

# 7 Device Code and Address Code

Use device code and address code when you select "Device Type & Address" for the address type in data displays.

### 7.1 Modicon Syntax

Device	Device Name	Device Code (HEX)	Address Code
Coil	0	0080	(Word Address - 1) /16
Discrete Input	1	0081	(Word Address - 1) /16
Input Register	3	0001	Word Address - 1
Holding Register	4	0000	Word Address - 1

### 7.2 IEC61131 Syntax

Address Mode: 0-based

Device	Device Name	Device Code (HEX)	Address Code	
Coil	%M	0080	Word Address /16	
Holding Register	%MW	0000	Word Address	

### Address Mode: 1-based

Device	Device Name	Device Code (HEX)	Address Code
Coil	%M	0080	(Word Address - 1)/16
Holding Register	%MW	0000	Word Address - 1

### 8 Error Messages

Error messages are displayed on the screen of the Display as follows: "No. : Device Name: Error Message(Error Occurrence Area)". Each description is shown below.

Item	Description
No.	Error No.
Device Name	Name of the External Device where error occurs. Device name is a title of the External Device set with GP-Pro EX.((Initial value[PLC1])
Error Message	Displays messages related to the error which occurs.
	Displays IP address or device address of the External Device where error occurs, or error codes received from the External Device.
Error Occurrence Area	<ul> <li>NOTE</li> <li>IP address is displayed such as "IP address(Decimal): MAC address( Hex)".</li> <li>Device address is displayed such as "Address: Device address".</li> <li>Received error codes are displayed such as "Decimal[Hex]".</li> </ul>

#### Display Examples of Error Messages

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 2[02H])"

NOTE
Please refer to the manual of the External Device for more detail of received error codes.
Refer to "Display-related errors" in "Maintenance/Troubleshooting Guide" for details on the error messages common to the driver.

### Error Codes Specific to the External Device

Error codes specific to the External Device are shown below.

Error Code	Description		
RHxx128	Checksum does not match the packet actually received.		
RHxx129	The MODBUS slave driver cannot be shared between COM1 and COM2.		
RHxx130	The MODBUS slave driver cannot be used with the driver for COM%d.		

## 9 Command Format

This driver supports the commands below.

Command	Function code		Minimum Points	Maximum Points	Device
Bit Block Read	Read Coil Status	0x01	16 Bits	2000 Bits	Coil
Dit Diock Read	Read Input Status	0x02	10 Dits	2000 Bits	Discrete Input
Word Block Read	Read Holding Register	0x03	1 Word	125 Words	Holding Register
	Read Input Register	0x04	i word		Input Register
Bit Block Write	Force Single Coil	0x05	1 Bit	1 Bit	Coil
Dit Diock Write	Force Multiple Coils	0x0F	1 Bit	1968 Bits	Coll
Word Block Write	Preset Single Register	0x06	1 Word	1 Word	Holding Register
Word Diock Write	Preset Multiple Registers	0x10	1 Word	123 Words	Tioluling Register
Diagnostics <sup>*1 *2</sup>	Preset Loop Back	0x08	-	-	-

\*1 Diagnostics command is supported by the driver of which version is V1.12.02 or later.

\*2 Diagnostics command is only supported by serial communication.
