Introduction

This manual describes how to connect the Display and the External Device (target PLC).

In this manual, the connection procedure will be described in the sections identified below:

1 System Configuration

The system configuration in the case when the External Device and the Display are connected is shown.

Series	CPU	Link I/F	SIO Type	Setting Example
Bus Terminal	BC9000 BC9100	RJ45 on CPU unit	Ethernet (TCP)	"Setting Example 1" (page 6)
Controller	BX9000	X900	Ethernet (TCP)	"Setting Example 1" (page 6)
	CX1000	X01	Ethernet (TCP)	"Setting Example 2" (page 8)
Embedded PC	CX1010	X001	Ethernet (TCP)	"Setting Example 2" (page 8)
Embedded i O	CX1020	X01 or X02	Ethernet (TCP)	"Setting Example 2" (page 8)
	CX9000	X001 or X02	Ethernet (TCP)	"Setting Example 2" (page 8)
IPC/TwinCAT2- SoftPLC	IPC PC/AT	RJ45	Ethernet (TCP)	"Setting Example 3" (page 10)
IPC/TwinCAT3-	IPC PC/AT	RJ45	Ethernet (TCP)	"Setting Example 4" (page 12)
Runtime	CX5020	X000 or X001	Ethernet (TCP)	"Setting Example 5" (page 14)

Connection Configuration

• 1:1 Connection

1:n Connection

• n:1 Connection

n:m Connection

* The number of Displays you can connect depends on the External Device. Check the specifications of the External Device. Adding more External Devices increases the load, which may require adjustments to the Timeout time.

2 External Device Selection

Select the External Device to be connected to the Display.

Swelcome to GP-Pro EX	Device/PLC	ices/PLCs
		Device/PLC 1
	Manufacturer	Beckhoff Automation GmbH
	Series	TwinCAT ADS/AMS
	Port	Ethernet (TCP)
		Refer to the manual of this Device/PLC

	Use System	Area Device Information
	Back (B	Communication Settings New Logic New Screen Cancel

Setup Items	Setup Description	
Number of Devices/PLCs	Use an integer from 1 to 4 to enter the number of Devices/PLCs to connect to the display.	
Manufacturer	Select the manufacturer of the External Device to be connected. Select "Beckhoff Automation GmbH".	
Series	Select a model (series) of the External Device to be connected and connection method. Select "TwinCAT ADS/AMS". Check the External Device which can be connected in "TwinCAT ADS/AMS" in system configuration. "I System Configuration" (page 3)	
Port	Select the Display port to be connected to the External Device. Select "Ethernet (TCP)".	
Use System Area	 Check this option to synchronize the system data area of the Display and the device (memory) of the External Device. When synchronized, you can use the External Device's ladder program to switch the display or display the window on the Display. Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)" This feature can also be set in GP-Pro EX or in the Display's offline mode. Cf. GP-Pro EX Reference Manual "System Settings [Display Unit] - [System Area] Settings Guide" Cf. Maintenance/Troubleshooting Guide "Main Unit - System Area Settings" 	

3 Communication Settings

Examples of communication settings of the Display and the External Device, recommended by Pro-face, are shown.

3.1 Setting Example 1

- Settings of GP-Pro EX
- Communication Settings

To display the setup screen, from the [Project] menu, point to [System Settings] and select [Device/PLC].

Device/PLC 1

NOTE	• Check with a network administ the same network.	strator about IP address. De	o not set the duplicate IP addres

- Set IP address and Port Number for the External Device in the [Individual Device Settings] dialog box.
- You need to set the IP address for the Display in offline mode.

Settings of External Device

Use the TwinCAT for setting up communication with the External Device. Refer to your External Device manual for details.

1 Set up the External Device as in the following table, and add to the TwinCAT system. Please refer to the manual of the External Device for more details.

Setup Items	Setting Value
Address	192.168.0.1
AMS Net Id	192.168.0.1.1.1

2 Add the Display's IP address and AMS NetId to the TwinCAT system.

Right click the TwinCAT icon in the Notification Area, and select [Properties].

- **3** In the [AMS Router] tab, click [Add].
- 4 Enter the following settings and click [OK].

Setup Items	Setting Value
AMS Net Id	192.168.0.2.1.1
Address	192.168.0.2
Transport	TCP/IP

• In the AMS Net Id, set a value that appends 1.1 to the IP address.

- **5** Restart the TwinCAT system.
- 6 Create the project in TwinCAT PLC Control, and download to the External Device.

NOTE	•	Check with a network administrator about IP address. Do not set the duplicate IP address in
		the same network.

- Set the IP address and Port Number for the External Device in the [Individual Device Settings] dialog box.
- You need to set the IP address for the Display in offline mode.

3.2 Setting Example 2

Settings of GP-Pro EX

Communication Settings

To display the setup screen, from the [Project] menu, point to [System Settings] and select [Device/PLC].

	New Edit	New Edit
	OK (Q) Cancel	OK (0) Cancel

NOTE

- When using Embedded PC/IPC, in the [TPY File] field define the TPY file (tag data) output by TwinCAT ADS/AMS.
- Check with a network administrator about IP address. Do not set the duplicate IP address in the same network.
- Set the IP address and Port Number for the External Device in the [Individual Device Settings] dialog box.
- You need to set the IP address for the Display in offline mode.

Settings of External Device

Use the TwinCAT for communication settings of the External Device. Refer to your External Device manual for details.

1 Set up the External Device as in the following table. Please refer to the manual of the External Device for more details.

Setup Items	Setting Value
Address	192.168.0.1
AMS Net Id	192.168.0.1.1.1

2 Change the target to External Device.

From the TwinCAT System Manager's tree view, select [SYSTEM - Configuration].

- **3** From the [General] tab, click [Choose Target] to display a dialog box. Select the External Device. When selecting the target, set the [Target Route] and [Remote Route] to [Static].
- **4** Set up the Display's IP address and AMS NetId on the External Device.

From the TwinCAT System Manager's tree view, select [SYSTEM - Configuration] and then [Route Settings] to display a screen.

- 5 Select the [Static Route] tab and click [Add].
- 6 Enter the following settings and click [Add Route].

Setup Items	Setting Value
AmsNetId	192.168.0.2.1.1
Transport Type	TCP/IP
Address Info	192.168.0.2 (IP Address)
Target Route	Static
Remote Route	none

• In the AmsNetId, set a value that appends 1.1 to the IP address.

7 Create the project in TwinCAT PLC Control, and download to the External Device.

NOTE

- Check with a network administrator about IP address. Do not set the duplicate IP address in the same network.
- Set the IP address and Port Number for the External Device in the [Individual Device Settings] dialog box.
- You need to set the IP address for the Display in offline mode.

AMS NetId (Byte 1-4) / AMS NetId (Byte 5, 6)	Enter the External Device's AMS NetId. AMS NetId is the IP Address with 1.1 appended.
ADS Port	Set up the ADS Port.
AMS Router Port	Displays the AMS Router Port. AMS Router Port is fixed to 48898.

5 Supported Devices

Range of supported device address is shown in the table below. Please note that the actually supported range of the devices varies depending on the External Device to be used. Please check the actual range in the manual of your External Device.

5.1 Bus Terminal Controller

	Inis address can be specified as system data area.						
Dovico	Rit Addross	Word Addross	32 hit	Group Index			
Device	Bit Address	Word Address	52 DIL	Bit Address	Word Address		
Input Relay	%IX00000.0 - %IX65535.7	%IW00000 - %IW65534		0x0000 F021	0x0000 F020		
Output Relay	%QX00000.0 - %QX65535.7	%QW00000 - %QW65534] L / H)	0x0000 F031	0x0000 F030		
Internal Relay	%MX00000.0 - %MX65535.7	%MW00000 - %MW65534		0x0000 4021	0x0000 4020		
Data Area	%DX0000000 - %DX16777215	%DW0000000 - %DW16777214		0x0000 4040	0x0000 4040		

NOTE

• Please refer to the GP-Pro EX Reference Manual for system data area.

Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)"

• Please refer to the precautions on manual notation for icons in the table.

"Manual Symbols and Terminology"

5.2 Embedded PC Series / IPC/TwinCAT2-SoftPLC (Tag)

You can import tag data from projects created using TwinCAT.

This address can be specified as system data area.

Device		Bit Address	Word Address	32 bit	Notes
	Single	<tagname></tagname>	-		
	1D Array	<tagname>[xl] - <tagname>[xh]</tagname></tagname>	-		
BOOL	2D Array	sray <tagmname>[xl,yl] - <tagname>[xh,yh] -</tagname></tagmname>		-	· 1
	3D Array	<tagname>[xl,yl,zl] - <tagname>[xh,yh,zh]</tagname></tagname>	-		
	Single	<tagname>.00 - <tagname>.07</tagname></tagname>	<tagname></tagname>		
BYTE	1D Array	<tagname>[xl].00 - <tagname>[xh].07</tagname></tagname>	<tagname>[xl] - <tagname>[xh]</tagname></tagname>		*1
USINT	2D Array	<tagname>[xl,yl].00 - <tagname>[xh,yh].07</tagname></tagname>	<tagname>[xl,yl] - <tagname>[xh,yh]</tagname></tagname>		
	3D Array	<tagname>[xl,yl,zl].00 - <tagname>[xh,yh,zh].07</tagname></tagname>	<tagname>[xl,yl,zl] - <tagname>[xh,yh,zh]</tagname></tagname>		
	Single	<tagname>.00 - <tagname>.15</tagname></tagname>	<tagname></tagname>

	3D Array	<tagname>[xl,yl,zl].00 - <tagname>[xh,yh,zh].31</tagname></tagname>	<tagname>[xl,yl,zl] - <tagname>[xh,yh,zh]</tagname></tagname>		
	Single	-	<tagname></tagname>		
REAL ^{*3} TIME	1D Array	-	<tagname>[xl] - <tagname>[xh]</tagname></tagname>		* 1
TIME_OF_ DAY DATE AND	2D Array	-	<tagname>[xl,yl] - <tagname>[xh,yh]</tagname></tagname>		*1
DATE_AND _TIME ^{*4}	3D Array	-	<tagname>[xl,yl,zl] - <tagname>[xh,yh,zh]</tagname></tagname>		

Device		Bit Address	Word Address	32 bit	Notes
	Single		<tagname></tagname>		
	1D Array		<tagname>[xl] - <tagname>[xh]</tagname></tagname>		4145
STRING	2D Array	-	<tagname>[xl,yl] - <tagname>[xh,yh]</tagname></tagname>	-	*1*5
	3D Array		<tagname>[xl,yl,zl] - <tagname>[xh,yh,zh]</tagname></tagname>		

*1 <TAGNAME>: TagName including structure name in case of structure. The maximum number of characters for Symbol Name is 255 including delimiters and element number. In addition, maximum number of characters when using D-Script, limited to 54 characters. Example)

zxample)	
BOOL type single symbol	"BOOLSYMBOL"
BOOL type 1D Array	"BOOL1D[10]"
WORD type 2D Array	"WORD2D[10,10]"
UDINT type 3D Array	"UDINT3D[0,1,2]"
STRING in User Defined Structure [STRUCT001]	"STRUCT001.STRINGSYM"

- You cannot start names with any of the following text: LS, USR, SCR, PRT
- *2 The system data area is initially set up with 16 words of items. If you set up less than 16 words of items, after allocating a 16 word or larger array of tags in the system data area, select only the necessary items.
- *3 32 bit type
- *4 DATE_AND_TIME is a 64-bit data type in theDisplay, and a 32-bit data type on the External Device. Bit conversion is handled by the protocol. The Display supports precision to the milliseconds. The External Device supports precision to the seconds.
- *5 Up to 1414 single-byte characters are supported by the STRING data type. Characters 1415 or higher are ignored.

IMPORTANT • You can use tags on supported Displays. To check if tags are supported by your Display, in the GP-Pro EX Reference Manual's "Supported Features", see "Import Device/PLC tags".

- The tag import feature is supported in GP-Pro EX V3.01.000 or later (or in the case of GP-4*01TM, V3.10.000 or later).
- To import tags, use tag data output from TwinCAT2's TwinCAT 2.11 Version 2237 or earlier.

• You cannot use tags with nested arrays (for example, Array[x][y].Structure) in GP-Pro EX. Design your tags using multidimensional arrays (for example, Array[x,y].Structure) so you can use them in GP-Pro EX.

• When using this driver, if you have many parts on a screen set up with tags, changing screens and displaying windows may take longer than expected. This is due to the time required to reference tag values on the screen or window.

To reduce the time to change screens or display windows, consider separating the parts onto multiple screens.

• Please refer to the GP-Pro EX Reference Manual for system data area.

```
Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)"
```

• Please refer to the precautions on manual notation for icons in the table.

"Manual Symbols and Terminology"

Importing Tag File

1 In GP-Pro EX, open the [Individual Device Settings] dialog box, and from the [Series] drop-down list, select "Embedded PC/IPC". Set [ADS Port] to [TwinCAT2], and the [Import Type] to [Tag].

🎒 Individual Device Set	tings X

- NOTE
- For details on importing tags, see "Using Device/PLC Tags" in the GP-Pro EX Reference Manual.
 GP-Pro EX does not support editing or deleting global scope symbols. To modify those symbols, please override them by TPY file import or create a new symbol list by selecting [New].

5.3 Embedded PC Series / IPC/TwinCAT2-SoftPLC (Symbol)

You can import symbols only from projects created using TwinCAT. You cannot create symbols in GP-Pro EX.

This address can be specified as system data area.

*1 <TAGNAME>: TagName including structure name in case of structure. The maximum number of characters for Symbol Name is 255 including delimiters and element number. In addition, maximum number of characters when using D-Script, limited to 54 characters. Example)

zample)	
BOOL type single symbol	"BOOLSYMBOL"
BOOL type 1D Array	"BOOL1D[10]"
WORD type 2D Array	"WORD2D[10,10]"
UDINT type 3D Array	"UDINT3D[0,1,2]"
STRING in User Defined Structure [STRUCT001]	"STRUCT001.STRINGSYM"

- You cannot start names with any of the following text: LS, USR, SCR, PRT
- *2 The system data area is initially set up with 16 words of items. If you set up less than 16 words of items, after allocating a 16 word or larger array of tags in the system data area, select only the necessary items.
- *3 32 bit type

- *4 DATE_AND_TIME is a 64-bit data type in theDisplay, and a 32-bit data type on the External Device. Bit conversion is handled by the protocol. The Display supports precision to the milliseconds. The External Device supports precision to the seconds.
- *5 Up to 1414 single-byte characters are supported by the STRING data type. Characters 1415 or higher are ignored.

IMPORTANT • You can use tags on supported Displays. To check if tags are supported by your Display, in the GP-Pro EX Reference Manual's "Supported Features", see "Import Device/PLC tags".

- The tag import feature is supported in GP-Pro EX V3.01.000 or later (or in the case of GP-4*01TM, V3.10.000 or later).
- To import tags, use tag data output from TwinCAT3's TwinCAT 3.1 Version 3.1.4012.0 or earlier.

• You cannot use tags with nested arrays (for example, Array[x][y].Structure) in GP-Pro EX. Design your tags using multidimensional arrays (for example, Array[x,y].Structure) so you can use them in GP-Pro EX.

• When using this driver, if you have many parts on a screen set up with tags, changing screens and displaying windows may take longer than expected. This is due to the time required to reference tag values on the screen or window.

To reduce the time to change screens or display windows, consider separating the parts onto multiple screens.

- Please refer to the GP-Pro EX Reference Manual for system data area.
 - Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)"
- Please refer to the precautions on manual notation for icons in the table.

"Manual Symbols and Terminology"

Importing Tag File

1 In GP-Pro EX, open the [Individual Device Settings] dialog box, and from the [Series] drop-down list, select "Embedded PC/IPC". Set [ADS Port] to [TwinCAT3], and the [Import Type] to [Tag].

🎒 Individual Device Se	ettings

- NOTE
- For details on importing tags, see "Using Device/PLC Tags" in the GP-Pro EX Reference Manual.
 GP-Pro EX does not support editing or deleting global scope symbols. To modify those symbols, please override them by TPY file import or create a new symbol list by selecting [New].

5.5 Embedded PC Series / IPC/TwinCAT3-Runtime (Symbol)

You can import symbols only from projects created using TwinCAT. You cannot create symbols in GP-Pro EX.

NOTE • When there are symbols that failed to import, you can save the generated error log.

6 Device Code and Address Code

Use device code and address code when you select "Device Type & Address" for the address type in data displays.

NOTE • When select [Embedded PC/IPC] in series of the External Device, cannot use a device cord and the address code.

Device	Device Name	Device Code (HEX)	Address Code
Input	%I	0001	Word address
Output	%Q	0002	Word address
Marker	%M	0003	Word address
Data	%D	0000	Word address

7 Error Messages

Error messages are displayed on the screen of Display as follows: "No. : Device Name: Error Message (Error Occurrence Area)". Each description is shown below.

Item	Description
No.	Error No.
Device Name	Name of External Device where error occurs. Device name is a title of External Device set with GP-Pro EX. (Initial value [PLC1])
Error Message	Displays messages related to the error which occurs.
	Displays IP address or device address of External Device where error occurs, or error codes received from External Device.
Error Occurrence Area	 NOTE IP address is displayed such as "IP address (Decimal): MAC address (Hex)". Device address is displayed such as "Address: Device address". Received error codes are displayed such as "Decimal [Hex]".

Display Examples of Error Messages

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 2 [02H])"

• Refer to your External Device manual for details on received error codes.
• Refer to "Display-related errors" in "Maintenance/Troubleshooting Guide" for details on the error messages common to the driver.

Error Messages Unique to External Device

Message ID	Error Message	Description
RHxx128	NodeName:Out of range value in write request (Address: %s)	This message appears when writing out of range values from the Display to DATE, TOD, or DT data types on the External Device.
