Introduction

This manual describes how to connect the Display and the External Device (target PLC).

In this manual, the connection procedure will be described by following the below sections:

| | - | |
|---|--|--|
| 1 | System Configuration This section shows the types of External Devices which can be connected and SIO type. | "1 System Configuration" (page 3) |
| _ | | |
| 2 | Selection of External Device Select a model (series) of the External Device to be connected and connection method. | ি "2 Selection of External Device" (page 8) |
| | | |
| 3 | Example of Communication Settings This section shows setting examples for communicating between the Display and the External Device. | "3 Example of Communication Setting" (page 9) |
| | | |
| 4 | Setup Items This section describes communication setup items on the Display. Set communication settings of the Display with GP-Pro Ex or in off-line mode. | ^{ভেল} "4 Setup Items" (page 19) |
| | | |
| 5 | Cable Diagram This section shows cables and adapters for connecting the Display and the External Device. | ^{ক্লে} "5 Cable Diagram" (page 24) |
| | | |
| | Operation | |

1 System Configuration

The system configuration in the case when the External Device of GE Fanuc Automation and the Display are connected is shown.

| Series | CPU | Link I/F | SIO Type | Setting Example | Cable Diagram |
|-----------------|---|---|-------------------|-----------------------------------|------------------------------|

*1 Select SNP-X protocol using the programming console, and the PLC's WYE cable is necessary. Both Port1 and Port2 can be used as RS-232C connection, and only Port2 can be used as RS-485 connection. When Port2 is used, programming console is needed to select RS-232C or RS-485 connection.

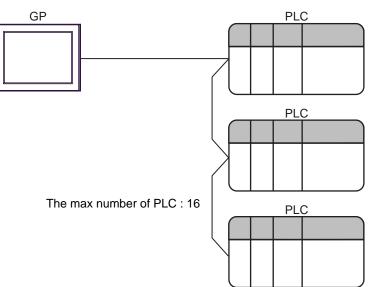

*2 Select SNP-X protocol using the programming console, and change the interface of Port1/Port2 to RS-232C or RS-485.

Connection Configuration

• 1:1 Connection

• 1:n Connection

■ COM Port of IPC

When connecting IPC with External Device, the COM port which can be used changes with series and SIO type. Please refer to the manual of IPC for details.

Usable port

| Series | Usable port | | | |
|------------------------------------|--|--------------------|--------------------|--|
| Genes | RS-232C | RS-422/485(4 wire) | RS-422/485(2 wire) | |
| PS-2000B | COM1 ^{*1} , COM2, COM3 ^{*1} , COM4 | - | - | |
| PS-3650A, PS-3651A | COM1 ^{*1} | - | - | |
| PS-3700A (Pentium®4-M) PS-3710A | COM1 ^{*1} , COM2 ^{*1} , COM3 ^{*2} , COM4 | COM3 ^{*2} | COM3 ^{*2} | |
| PS-3711A | COM1 ^{*1} , COM2 ^{*2} | COM2 ^{*2} | COM2 ^{*2} | |

*1 The RI/5V can be switched. Please switch with the change switch of IPC.

*2 It is necessary to set up the SIO type with the Dip switch. Please set up as follows according to SIO type to be used.

Dip switch setting: RS-232C

| Dip switch | Setting | Description | |
|------------|---------|---|--|
| 1 | OFF | Reserve (always OFF) | |
| 2 | OFF | SIO type: RS-232C | |
| 3 | OFF | 510 type. K5-252e | |
| 4 | OFF | Output mode of SD (TXD) data: Always output | |
| 5 | OFF | Terminal resistance (220 Ω) insertion to SD (TXD): None | |
| 6 | OFF | Terminal resistance (220 Ω) insertion to RD (RXD): None | |
| 7 | OFF | Short-circuit of SDA (TXA) and RDA (RXA): Does not Exist | |
| 8 | OFF | Short-circuit of SDB (TXB) and RDB (RXB): Does not Exist | |
| 9 | OFF | RS (RTS) Auto control mode: Disable | |
| 10 | OFF | | |

Dip switch setting: RS-422/485 (4 wire)

| Dip switch | Setting | Description | |
|------------|---------|---|--|
| 1 | OFF | Reserve (always OFF) | |
| 2 | ON | SIO type: RS-422/485 | |
| 3 | ON | 510 type. K5-422/465 | |
| 4 | OFF | Output mode of SD (TXD) data: Always output | |
| 5 | OFF | Terminal resistance (220 Ω) insertion to SD (TXD): None | |
| 6 | OFF | Terminal resistance (220 Ω) insertion to RD (RXD): None | |
| 7 | OFF | Short-circuit of SDA (TXA) and RDA (RXA): Does not Exist | |
| 8 | OFF | Short-circuit of SDB (TXB) and RDB (RXB): Does not Exist | |
| 9 | OFF | RS (RTS) Auto control mode: Disable | |
| 10 | OFF | | |

Dip switch setting: RS-422/485 (2 wire)

| Dip switch | Setting | Description | |
|------------|---------|---|--|
| 1 | OFF | Reserve (always OFF) | |
| 2 | ON | SIO type: RS-422/485 | |
| 3 | ON | 510 type. K5-422/485 | |
| 4 | OFF | Output mode of SD (TXD) data: Always output | |
| 5 | OFF | Terminal resistance (220 Ω) insertion to SD (TXD): None | |
| 6 | OFF | Terminal resistance (220 Ω) insertion to RD (RXD): None | |
| 7 | ON | Short-circuit of SDA (TXA) and RDA (RXA): Exist | |
| 8 | ON | Short-circuit of SDB (TXB) and RDB (RXB): Exist | |
| 9 | ON | RS (RTS) Auto control mode: Enable | |
| 10 | ON | | |

2 Selection of External Device

Select the External Device to be connected to the Display.

| ð | 💰 New Project File 🛛 🗙 | | | | | |

Settings of External Device

Use the ladder software for communication settings. (Check the operation in CIMPLICITY Machine Edition V4.50)

- 1 Select "Add Target" -> "GE Fanuc PLC" among "Project" of tool bar and select the series to be connected. The selected series is added as "Target" in the project.
- 2 Allocate the power supply module and the CPU module in "Hardware Configuration" -> "Main Rack" of added Target.

- **3** Double-click the CPU module, display the setting window.
- 4 Click the [Settings] tab and set the communication settings.
- 5 Forward the communication settings to the external device and spend a power supply of the external device again.

♦ Setup Items

| Setup Items | Setup Description |
|-----------------|-------------------|
| Data Rate [bps] | 19200 |
| Parity | Odd |
| Stop Bits | 1 |
| SNP ID | 1 |

Notes

• Please refer to the manual of the ladder software for more detail on other setting description.

| Setup Items | Setup Description | | |
|--------------|--|--|--|
| SIO Type | Select the SIO type to communicate with the External Device. | | |
| Speed | Select speed between the External Device and the Display. | | |
| Data Length | Display data length. | | |
| Parity | Select how to check parity. | | |
| Stop Bit | Select stop bit length. | | |
| Flow Control | Select the communication control method to prevent overflow of transmission and reception data. | | |
| Timeout | Use an integer from 1 to 127 to enter the time (s) for which the Display waits for the response from the External Device. | | |
| Retry | In case of no response from the External Device, use an integer from 0 to 255 to enter how many times the Display retransmits the command. | | |

| Setup Items | Setup Description |
|--------------|---|
| Wait To Send | Use an integer from 0 to 255 to enter standby time (ms) for the Display from receiving packets to transmitting next commands. |
| RI/VCC | You can switch RI/VCC of the 9th pin when you select RS232C for SIO type. It is necessary to change RI/5V by changeover switch of IPC when connect with IPC. Please refer to the manual of the IPC for more detail. |

Device Setting

To display the setting screen, click I ([Setting]) of External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

When you connect multiple External Device, click if from [Device-Specific Settings] of [Device/PLC Settings] to add another External Device.

| 💰 Individual Devi | ce Setti 🗙 |

5 Cable Diagram

The cable diagram shown below may be different from the cable diagram recommended by Schneider Electric Industries. Please be assured there is no operational problem in applying the cable diagram shown in this manual.

- The FG pin of the External Device body must be D-class grounded. Please refer to the manual of the External Device for more details.
- SG and FG are connected inside the Display. When connecting SG to the External Device, design the system not to form short-circuit loop.
- Connect the isolation unit, when communication is not stabilized under the influence of a noise etc..

NOTE

• Please refer to the GP-Pro EX Reference Manual for system data area.

Cf. GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"

Please refer to the precautions on manual notation for icons in the table.

"Manual Symbols and Terminology"

7 Device Code and Address Code

Use device code and address code when you select "Device Type & Address" for the address type in data displays.

| Device | Device Name | Device Code (HEX) | Address Code | |
|-------------------------------|-------------|----------------------|-------------------------|--|
| Discrete inputs | % I | 0080 | (Word address - 1) / 16 | |
| Discrete outputs | %Q | 0081 | (Word address - 1) / 16 | |
| Discrete Globals | %M | 0083 | (Word address - 1) / 16 | |
| Internal coils | %G | 0082 | (Word address - 1) / 16 | |
| Temporary coils | %T | 0084 | (Word address - 1) / 16 | |
| System status references | %SA | 0086 | (Word address - 1) / 16 | |
| | %SB | 0087 | (Word address - 1) / 16 | |
| | %SC | 0088 | (Word address - 1) / 16 | |
| | %S | 0085 | (Word address - 1) / 16 | |
| System register references | %R | 0000 | Word address - 1 | |
| Analog inputs | %AI | 0001 | Word address - 1 | |
| Analog outputs | %AQ | 0002 | Word address - 1 | |

8 Error Messages

Error messages are displayed on the screen of Display as follows: "No. : Device Name: Error Message (Error Occurrence Area)". Each description is shown below.

| Item | Description | | |
|-----------------------|---|--|--|
| No. | Error No. | | |
| Device Name | Name of External Device where error occurs. Device name is a title of External Device set with GP-Pro EX. (Initial value [PLC1]) | | |
| Error Message | Displays messages related to the error which occurs. | | |
| Error Occurrence Area | Displays IP address or device address of External Device where error occurs, or error codes received from External Device. | | |
| | NOTE IP address is displayed such as "IP address (Decimal): MAC address (Hex)". Device address is displayed such as "Address: Device address". Received error codes are displayed such as "Decimal [Hex]". | | |

Display Examples of Error Messages

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 2 [02H])"

NOTE
Please refer to the manual of External Device for more detail of received error codes.
Please refer to "When an error message is displayed (Error code list)" of "Maintenance/ Troubleshooting" for a common error message to the driver.

Error Code Peculiar to External Device

The error code characteristic of the external device is displayed in 2 Byte of "Major Error Status Code (1 Byte)" and "Minor Error Status Code (1 Byte)".

When received the error code from the external device, add to the below message. "Major Error Status Code" is displayed continuously "Major" and "Minor Error Status Code" is displayed continuously "Minor". For details of the error code, please refer to the manual of the external device.

| Message ID | Error Message | Description |
|------------|---|---|
| RHxx128 | (Node Name): Error has been responded for initial communication command (Major:[%02Xh], Minor:[%02Xh]) | Display the error message, when the error occurred by the reading demand. |
| RHxx129 | (Node Name): Error has been responded for device read command (Major:[%02Xh], Minor:[%02Xh]) | Display the error message, when the error occurred by the reading demand. |
| RHxx130 | (Node Name): Error has been responded for device write command (Major:[%02Xh], Minor:[%02Xh]) | Display the error message, when the error occurred by the write demand. |
| RHxx131 | (Node Name): Error has been responded for device write command (Major:[%02Xh], Minor:[%02Xh] There are read only devises) | Display the error message, when write for the read only device. |

The error code peculiar to the external device is as follows.
