PREFACE

This manual describes how to connect the Display and the External Device (target Controller). In this manual, the connection procedure will be described by following the below sections:

1 System Configuration

The system configuration in the case when the External Device of Yamatake Corporation and the Display are connected is shown.

Series	CPU	Link I/F	SIO Type	Setting Example	Cable Diagram
SDC10	C10□□□□□05□□	Terminal block on the controller	RS422/485(2 wire)	Setting Example 1 (page 9)	Cable Diagram 5 (page 89)

◆ Connection Configuration

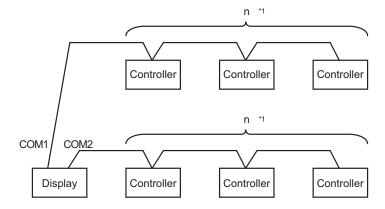

[Connection example 1:n]

[Connection example 1:n When using COM1 or COM2]

[Connection example 1:n When using COM1 and COM2]

- *1 You can connect maximum 16 units of External Device. Note that maximum 15 units can be connected if DMC10 is included.
 - NOTE
- Do not add the termination resistance when the Controller to be connected using 1:n connection includes the following series.
 - SDC15
 - SDC25/26
 - SDC35/36
 - DMC10

■ COM Port of IPC

When connecting IPC with External Device, the COM port which can be used changes with series and SIO type. Please refer to the manual of IPC for details.

Usable port

Series	Usable port			
Genes	RS-232C	RS-422/485(4 wire)	RS-422/485(2 wire)	
PS-2000B	COM1 ^{*1} , COM2, COM3 ^{*1} , COM4	-	-	
PS-3450A, PS-3451A	COM1, COM2*1*2	COM2*1*2	COM2*1*2	
PS-3650A, PS-3651A	COM1*1	-	-	
PS-3700A (Pentium®4-M) PS-3710A	COM1*1, COM2*1, COM3*2, COM4	COM3*2	COM3*2	
PS-3711A	COM1*1, COM2*2	COM2*2	COM2*2	
PL-3000B	COM1*1*2, COM2*1, COM3, COM4	COM1*1*2	COM1*1*2	

^{*1} The RI/5V can be switched. Please switch with the change switch of IPC.

Dip switch setting: RS-232C

Dip switch	Setting	Description	
1	OFF*1	Reserve (always OFF)	
2	OFF	SIO type: RS-232C	
3	OFF	510 type. R5-232c	
4	OFF	Output mode of SD (TXD) data: Always output	
5	OFF	Terminal resistance (220 Ω) insertion to SD (TXD): None	
6	OFF	Terminal resistance (220Ω) insertion to RD (RXD): None	
7	OFF	Short-circuit of SDA (TXA) and RDA (RXA): Does not Exist	
8	OFF	Short-circuit of SDB (TXB) and RDB (RXB): Does not Exist	
9	OFF	RS (RTS) Auto control mode: Disable	
10	OFF	AS (K13) Auto control mode. Disable	

 $^{^{*}1}$ It is necessary to turn ON the set value, only when using PS-3450A and PS-3451A.

^{*2} It is necessary to set up the SIO type with the Dip switch. Please set up as follows according to SIO type to be used.

Dip switch setting: RS-422/485 (4 wire)

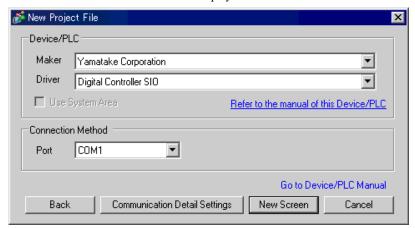

Dip switch	Setting	Description	
1	OFF	Reserve (always OFF)	
2	ON	SIO type: RS-422/485	
3	ON	310 type. K3-422/403	
4	OFF	Output mode of SD (TXD) data: Always output	
5	OFF	Terminal resistance (220Ω) insertion to SD (TXD): None	
6	OFF	Terminal resistance (220Ω) insertion to RD (RXD): None	
7	OFF	Short-circuit of SDA (TXA) and RDA (RXA): Does not Exist	
8	OFF	Short-circuit of SDB (TXB) and RDB (RXB): Does not Exist	
9	OFF	RS (RTS) Auto control mode: Disable	
10	OFF		

Dip switch setting: RS-422/485 (2 wire)

Dip switch	Setting	Description	
1	OFF	Reserve (always OFF)	
2	ON	SIO type: RS-422/485	
3	ON	510 type. R5-422/465	
4	OFF	Output mode of SD (TXD) data: Always output	
5	OFF	Terminal resistance (220Ω) insertion to SD (TXD): None	
6	OFF	Terminal resistance (220Ω) insertion to RD (RXD): None	
7	ON	Short-circuit of SDA (TXA) and RDA (RXA): Exist	
8	ON	Short-circuit of SDB (TXB) and RDB (RXB): Exist	
9	ON	RS (RTS) Auto control mode: Enable	
10	ON	NS (K13) Auto control mode. Enable	

2 Selection of External Device

Select the External Device to be connected to the Display.

Setup Items	Setup Description
Maker Select the maker of the External Device to be connected. Select "Yamatake Corpora	
Driver	Select a model (series) of the External Device to be connected and connection method. Select "Digital Controller SIO". Check the External Device which can be connected in "Digital Controller SIO" in system configuration. "" "1 System Configuration" (page 3)
Use System Area	Cannot use in this driver.
Port	Select the Display port to be connected to the External Device.

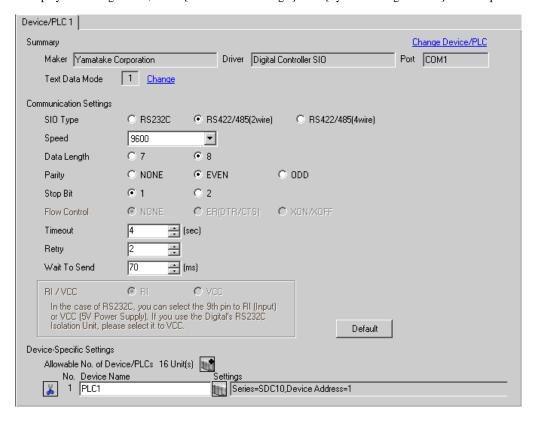

3 Example of Communication Setting

Examples of communication settings of the Display and the External Device, recommended by Digital Electronics Corp., are shown.

3.1 Setting Example 1

- Setting of GP-Pro EX
- ◆ Communication Settings

To display the setting screen, select [Device/PLC Settings] from [System setting window] in workspace.

IMPORT/ • When using SDC10, you need to set Wait To Send to 70ms or more.

To display the setting screen, click [[Setting]] of the External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

■ Settings of External Device

Use the PARA key, ENT key, down key and up key in front of the Controller for communication settings of the External Device. Please refer to the manual of the Controller for more details.

◆ Procedure

- 1. Press and hold the PARA key in operation mode (3 seconds) to move to the parameter mode.
- 2.Press and hold the PARA key in parameter mode (3 seconds) to move to the setup mode.
- 3. Press the PARA key several times to display the setup items.
- 4.Use the down/up keys to select the setting contents. (Setting value will blink.)
- 5. When you stop operating for 2 seconds, blinking of the setting value ends to confirm the change.
- 6.Press and hold the PARA key (3 seconds) to move to the standard display.

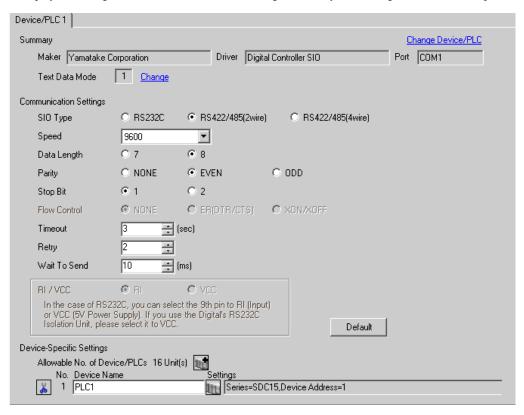

◆ Setting Value

Setup Items	Setting Value
C22	1
C23	0

3.2 Setting Example 2

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, click [[Setting]] of the External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

■ Settings of External Device

Use the PARA key, mode key, down key and up key in front of the Controller for communication settings of the External Device. Please refer to the manual of the Controller for more details.

◆ Procedure

- 1. Press and hold the PARA key in operation display (2 seconds) to move to the parameter setting display.
- 2.Press and hold the PARA key in the parameter setting display (2 seconds) to move to the setup display.
- 3. Press the PARA key several times to display the setup items.
- 4.Use the down/up keys to select the setting contents. (Setting value will blink.)
- 5. When you stop key operation for 2 seconds, blinking of the setting value ends to confirm the change.
- 6. Press the mode key to move to the standard display.

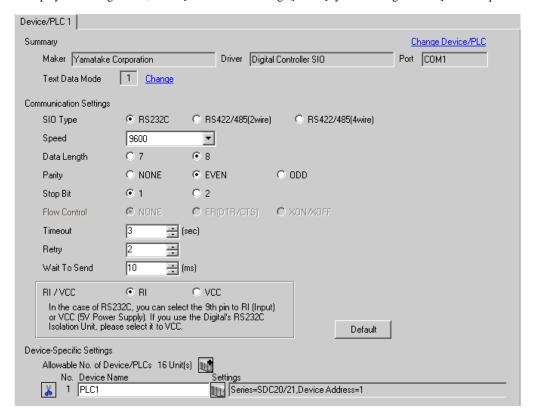

◆ Setting Value

C69	0

3.3 Setting Example 3

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, click [[Setting]] of the External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

■ Settings of External Device

Use the ENT key, DISP key, down key and up key in front of the Controller for communication settings of the External Device. Please refer to the manual of the Controller for more details.

◆ Procedure

- 1. Press and hold the ENT key and the down key together (3 seconds or more) to display the setup items.
- 2.Press the down/up keys to select the setup items and press the ENT key.
- 3. Use the down/up keys to select the setup contents and press the ENT key.
- 4. Press the DISP key to move to the standard display.

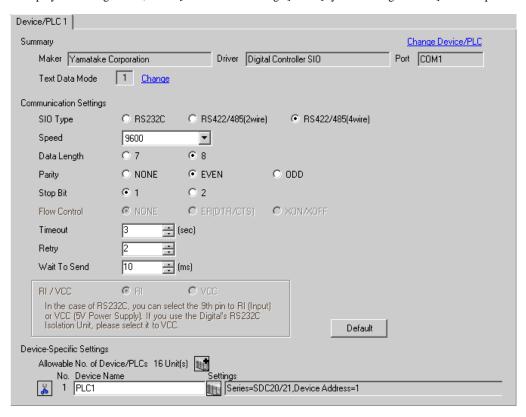

Setting Value

Setup Items	Setting Value

C32	0
C33	0

3.4 Setting Example 4

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, click [[Setting]] of the External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

■ Settings of External Device

Use the ENT key, DISP key, down key and up key in front of the Controller for communication settings of the External Device. Please refer to the manual of the Controller for more details.

◆ Procedure

- 1. Press and hold the ENT key and the down key together (3 seconds or more) to display the setup items.
- 2.Press the down/up keys to select the setup items and press the ENT key.
- 3. Use the down/up keys to select the setup contents and press the ENT key.
- 4. Press the DISP key to move to the standard display.

3.7 Setting Example 7

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, click [[Setting]] of the External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

Settings of External Device

Use the ENT key, DISP key, MODE key, down key and up key in front of the Controller for communication settings of the External Device. You can change the communication setting only in the READY mode. Move the External Device to the READY mode before setting.

Please refer to the manual of the Controller for more details.

◆ Procedure

- 1.Press the MODE key twice in the standard display. When the RUN/READY mode switch display appears, change to the READY mode.
- 2.Press and hold the ENT key and the down key together (3 seconds or more) to display the setup items.
- 3. Press the down/up keys to select the setup items and press the ENT key.
- 4.Use the down/up keys to select the setup contents and press the ENT key.
- 5. Press the DISP key to move to the standard display.

- Setting of GP-Pro EX
- Communication Settings

To display the setting screen, click [[Setting]] of the External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

Settings of External Device

Use the ladder software for communication setting of the External Device. (Operation confirmed using SLP-D10 V3.0.1) Set the device address of the External Device with the rotary switch on the front of the Controller. Please refer to the manual of the Controller for more details.

◆ Procedure

- 1.Set the device address with the rotary switch for the device address on the front of the Controller.
 - After setting, turn ON the power of the External Device again.
- 2.Click [Set] with the ladder software to display the setting screen.
- 3.Click [Model Setting] from the menu to select the model No. of the External Device.
- 4.Click [Environmental Setting] from the menu to perform the setup transfer setting.
- 5. Select [Communication] from [Basic Function] in the tree view to set the communication.
- 6. Transfer the setting to the External Device.

When writing is completed, turn on the power of the External Device again.

4 Setup Items

Set communication settings of the Display with GP-Pro Ex or in off-line mode of the Display.

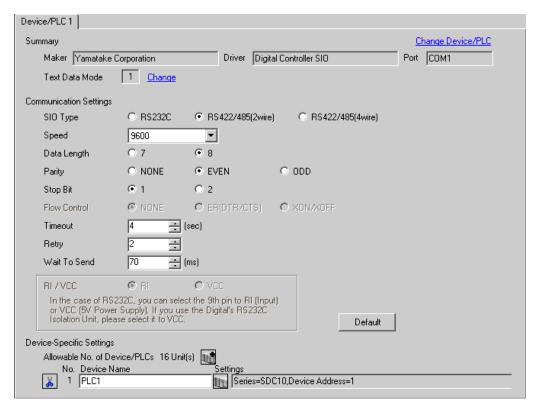

The setting of each parameter must be identical to that of External Device.

"3 Example of Communication Setting" (page 9)

4.1 Setup Items in GP-Pro EX

■ Communication Settings

To display the setting screen, select [Device/PLC Settings] from [System setting window] in workspace.

Setup Items	Setup Description		
SIO Type	Select the SIO type to communicate with the External Device.		
Speed	Select speed between the External Device and the Display.		
Data Length	Select data length.		
Parity	Select how to check parity.		
Stop Bit	Select stop bit length.		
Flow Control	Display the communication control method to prevent overflow of transmission and reception data.		
Timeout	Use an integer from 1 to 127 to enter the time (s) for which the Display waits for the response from the External Device.		

continued to next page

Setup Items	Setup Description		
Retry	In case of no response from the External Device, use an integer from 0 to 255 to enter how many times the Display retransmits the command.		
Wait To Send	Use an integer from 0 to 255 to enter standby time (ms) for the Display from receiving packets to transmitting next commands.		
RI/VCC	Switches RI/VCC of the 9th pin. It is necessary to change RI/5V by changeover switch of IPC when connect with IPC. Please refer to the manual of the IPC for more detail.		

To display the setting screen, click [[Setting]] of External Device you want to set from [Device-Specific Settings] of [Device/PLC Settings].

When you connect multiple External Device, click from [Device-Specific Settings] of [Device/PLC Settings] to add another External Device.

Setup Items	Setup Description	
Series	Displays a model of the External Device.	
Device Address	Enter the address of the External Device, using 1 to 127.	

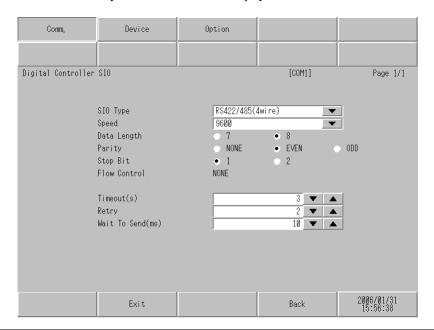

4.2 Settings in Off-Line Mode

- Please refer to Maintenance/Troubleshooting for more information on how to enter off-line mode or about operation.
- Cf: Maintenance/Troubleshooting "2.2 Offline Mode"

■ Communication Settings

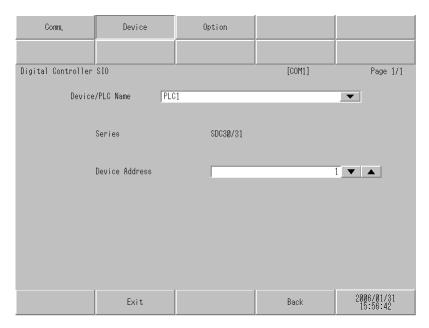

To display the setting screen, touch [Device/PLC Settings] from [Peripheral Equipment Settings] in the off-line mode. Touch External Device you want to set from the displayed list.

Setup Items	Setup Description		
	Select the SIO type to communicate with the External Device.		
SIO Type	To make the communication settings correctly, confirm the serial interface specifications of Display unit for [SIO Type]. We cannot guarantee the operation if a communication type that the serial interface does not support is specified. For details concerning the serial interface specifications, refer to the manual for Display		
	unit.		
Speed	Select speed between the External Device and the Display.		
Data Length	Select data length.		
Parity	Select how to check parity.		
Stop Bit	Select stop bit length.		
Flow Control	Display the communication control method to prevent overflow of transmission and reception data.		
Timeout	Use an integer from 1 to 127 to enter the time (s) for which the Display waits for the response from the External Device.		
Retry	In case of no response from the External Device, use an integer from 0 to 255 to enter how many times the Display retransmits the command.		

Setup Items	Setup Description
Wait To Send	Use an integer from 0 to 255 to enter standby time (ms) for the Display from receiving packets to transmitting next commands.

To display the setting screen, touch [Device/PLC Settings] from [Peripheral Equipment Settings]. Touch the External Device you want to set from the displayed list, and touch [Device Settings].

Setup Items	Setup Description		
Device/PLC Name	Select the External Device to set. Device name is a title of the External Device set with GP-Pro EX. (Initial value [PLC1])		
Series	Displays a model of the External Device.		
Device Address	Enter the address of the External Device, using 1 to 127.		

Option

To display the setting screen, touch [Device/PLC Settings] from [Peripheral Equipment Settings]. Touch the External Device you want to set from the displayed list, and touch [Option].

5 Cable Diagram

The cable diagram shown below may be different from the cable diagram recommended by Yamatake Corporation. Please be assured there is no operational problem in applying the cable diagram shown in this manual.

- The FG pin of the main body of the External Device must be D-class grounded. Please refer to the manual of the External Device for more details.
- SG and FG are connected inside the Display. When connecting SG to the External Device, design the system not to form short-circuit loop.
- Check the terminal No. on the side of External Device in the manual of the External Device. It varies
 depending on the additional function.
- Connect the isolation unit, when communication is not stabilized under the influence of a noise etc.
- · Recommended cable

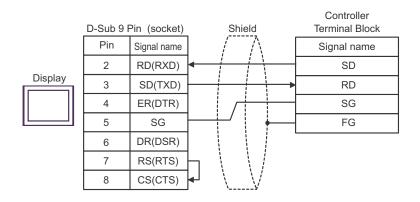

Company Name		Model No.	
Fujikura Densen	2 cores	IPEV-S-0.9mm ² x1P

NOTE

6 Supported Device

Range of supported device address is shown in the table below. Please note that the actually supported range of the devices varies depending on the External Device to be used. Please check the actual range in the manual of your External Device.

Enter the External Device address in the dialog below.

- 1. Address
- Enter the address.
- 2. Reference

Available parameter list is displayed.

Click the parameter to use and press "Select", then the address is entered.

6.1 SDC10

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00501.0-04504.F	00501-04504	[L/H]	*1

*1 When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.2 SDC15/SDC25/SDC26/SDC35/SDC36

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00273.0-31243.F	00273-31243	[L/H]	*1

^{*1} When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.3 SDC20/SDC21

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	0301.0-0690.F	0301-0690	[L/H]	*1

*1 When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.4 SDC30/SDC31

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00501.0-06049.F	00501-06049	[L/H]	*1

*1 When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.5 SDC40A

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00501.0-06100.F	00501-06100	[L/H]	*1

*1 When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.

- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.6 SDC40B

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00501.0-08902.F	00501-08902	[L/H]	*1

When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.7 SDC40G

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00501.0-06100.F	00501-06100	[L/H]	*1

*1 When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.

- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.9 DCP31/DCP32

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00501.0-04600.F	00501-04600	[L/H]	*1

^{*1} When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.10 DCP551

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00256.0-01712.F	00256-01712	[L/H]	*1

*1 When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

6.11 DCP552

This address can be specified as system data area.

Device	Bit Address	Word Address	32 bit	Remarks
Data	00256.0-02003.F	00256-02003	[L/H]	*1

When you write the bit address, the Display reads the word address corresponding to that of the External Device first. Then, it changes the target bit address among the word data once read and returns the word data to the External Device. Note that the correct data may not be written if you change the word address value in the ladder program while the Display reads the data of the External Device and returns it to the External Device.

- You can set only reading area size for the system data area available to use in the Controller. Please
 refer to the GP-Pro EX Reference Manual for reading area size.
- Cf: GP-Pro EX Reference Manual "Appendix 1.4 LS Area (only for direct access method)"
- Please refer to the precautions on manual notation for icons in the table.
 - "Manual Symbols and Terminology"
- Even if you use the nonexistent address, read error may not be displayed. In this case, "0" is retained for the read data. Note that the writing error is displayed.

7 Device Code and Address Code

Use device code and address code when you select "Device Type & Address" for the address type in data displays. Address of the External Device is configured as follows.

7.1 SDC10

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.2 SDC15/SDC25/SDC26/SDC35/SDC36

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.3 SDC20/SDC21

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.4 SDC30/SDC31

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.5 SDC40A

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.6 SDC40B

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.7 SDC40G

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.8 DMC10

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.9 DCP31/DCP32

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.10 DCP551

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

7.11 DCP552

Device	Device Name	Device Code (HEX)	Address Code
Data		0080	Word Address

8 Error Messages

Error messages are displayed on the screen of Display as follows: "No. : Device Name: Error Message(Error Occurrence Area)". Each description is shown below.

Item	Requirements	
No.	Error No.	
Device Name	Name of External Device where error occurs. Name of External Device is a title of External Device set with GP-Pro EX.(Initial value[PLC1])	
Error Message	Displays messages related to the error which occurs.	
Error Occurrence Area	Displays IP address or device address of External Device where error occurs, or error codes received from External Device.	
	 NOTE IP address is displayed such as "IP address(Decimal): MAC address(Hex)". Device address is displayed such as "Address: Device addressî. Received error codes are displayed such as "Decimal[Hex]". 	

Display Examples of Error Messages

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 2[02H])"

- Please refer to the manual of External Device for more detail of received error codes.
- Please refer to "When an error message is displayed (Error code list)" of "Maintenance/ Troubleshooting" for a common error message to the driver.
