Introduction

This manual describes how to connect the Display and the External Device (target PLC).

In this manual, the connection procedure will be described in the sections identified below:

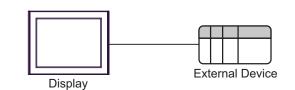

1 System Configuration

The system configuration in the case when the External Device of Yamaha Motor Co., Ltd. and the Display are connected is shown.

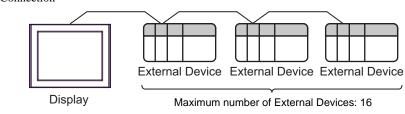

Series	CPU	Link I/F	SIO Type	Setting Example	Cable Diagram
TS-S	TS-S	COM1 on Controller		Setting Example 1 (page 7)	Cable Diagram (page 14)
TS-X	TS-X105 TS-X110 TS-X205 TS-X210 TS-X220		RS232C	Setting Example 1 (page 7)	Cable Diagram (page 14)
TS-P	TS-P105 TS-P110 TS-P205 TS-P210 TS-P220			Setting Example 1 (page 7)	Cable Diagram (page 14)

Connection Configuration

• 1:1 Connection

• 1:n Connection

NOTE

• To set up a 1:n connection, software on the External Device should be Ver.1.05.110 or later.

■ IPC COM Port

When connecting IPC with an External Device, the COM port used depends on the series and SIO type. Please refer to the IPC manual for details.

Usable port

Series	Usable Port			
Genes	RS-232C	RS-422/485(4 wire)	RS-422/485(2 wire)	
PS-2000B	COM1 ^{*1} , COM2, COM3 ^{*1} , COM4	-	-	
PS-3450A, PS-3451A, PS3000-BA, PS3001-BD	COM1, COM2 ^{*1*2}	COM2 ^{*1*2}	COM2 ^{*1*2}	
PS-3650A (T41 model), PS-3651A (T41 model)	COM1 ^{*1}	-	-	
PS-3650A (T42 model), PS-3651A (T42 model)	COM1 ^{*1*2} , COM2	COM1*1*2	COM1 ^{*1*2}	
PS-3700A (Pentium®4-M) PS-3710A	COM1 ^{*1} , COM2 ^{*1} , COM3 ^{*2} , COM4	COM3 ^{*2}	COM3 ^{*2}	
PS-3711A	COM1 ^{*1} , COM2 ^{*2}	COM2 ^{*2}	COM2 ^{*2}	
PS4000 ^{*3}	COM1, COM2	-	-	
PL3000	COM1 ^{*1*2} , COM2 ^{*1} , COM3, COM4	COM1*1*2	COM1 ^{*1*2}	

*1 The RI/5V can be switched. Use the IPC's switch to change if necessary.

*2 Set up the SIO type with the DIP Switch. Please set up as follows according to SIO type to be used.

*3 When making communication between an External Device and COM port on the Expansion slot, only RS-232C is supported. However, ER (DTR/CTS) control cannot be executed because of the specification of COM port.
For connection with External Device, use user created cables and disable Pin Nos. 1, 4, 6 and 9.

For connection with External Device, use user-created cables and disable Pin Nos. 1, 4, 6 and 9. Please refer to the IPC manual for details of pin layout.

DIP Switch setting: RS-232C

DIP Switch	Setting	Description	
1	OFF ^{*1}	Reserved (always OFF)	
2	OFF	SIO type: RS-232C	
3	OFF	510 type. K5-252C	
4	OFF	Output mode of SD (TXD) data: Always output	
5	OFF	Terminal resistance (220 Ω) insertion to SD (TXD): None	
6	OFF	Terminal resistance (220 Ω) insertion to RD (RXD): None	
7	OFF	Short-circuit of SDA (TXA) and RDA (RXA): Not available	
8	OFF	Short-circuit of SDB (TXB) and RDB (RXB): Not available	
9	OFF	RS (RTS) Auto control mode: Disabled	
10	OFF		

*1 When using PS-3450A, PS-3451A, PS3000-BA and PS3001-BD, turn ON the set value.

4

DIP Switch setting: RS-422/485 (4 wire)

DIP Switch	Setting	Description

Settings of External Device

1:1 connections do not require communication setup.

In 1:n connections, use TS Manager version V1.2.0 or later to set the Automatic Node Number Assignment.

For details on communication settings, please refer to the manual of the External Device.

NOTE	• To use both the host control device and the Display together, on the host control device turn
	ON the interlock (/LOCK) signal. The External Device will not operate unless the interlock
	signal is ON.

• To use the Display only, set the External Device Option parameters number 80, "Option enable", to "Disable." You can operate the External Device without the interlock.

4 Setup Items

Set up the Display's communication settings in GP Pro-EX or in the Display's offline mode.

The setting of each parameter must match that of the External Device.

⁽³⁾ "3 Communication Settings" (page 7)

4.1 Setup Items in GP-Pro EX

Communication Settings

To display the setup screen, from the [Project] menu, point to [System Settings] and select [Device/PLC].

Setup Items	Setup Description
RI/VCC	You can switch RI/VCC of the 9th pin when you select RS232C for SIO type. It is necessary to change RI/5V by changeover switch of IPC when connect with IPC. Please refer to the manual of the IPC for more detail.

NOTE	• GP-4100 series, GP-4*01TM and LT-4*01TM do not have the [Option] setting in the offline
	mode.

5 Cable Diagram

The cable diagram shown below may be different from the cable diagram recommended by Yamaha Motor Co., Ltd. Please be assured there is no operational problem in applying the cable diagram shown in this manual.

- The FG pin of the External Device body must be D-class grounded. Please refer to the manual of the External Device for more details.
- SG and FG are connected inside the Display. When connecting SG to the External Device, design the system not to form short-circuit loop.
- Connect the isolation unit, when communication is not stabilized under the influence of a noise etc.

F

*1 Define the point number you want to run, and perform a word write operation.

*2 Writing a value outside the setting range may cause the External Device to become unresponsive. Only write values within the setting range.

- *3 Operates when the bit turns on.
- *4 An error displays when turning ON the bit under either of the following conditions:
 During operation triggered by a command that did not come from the Display
 While not in operation.
- *5 Depending on the point data setting, the External Device may become unresponsive when stopping operation. Set up the time until the operation ends so it fits into the time-out time.
- *6 When the External Device is running due to input and output signals from the controller, and you use the Display to exit operation, the External Device will stop, but an unresponsive error will appear on the Display.
- *7 When the External Device experiences a SOFTLIMIT OVER error, even if you perform a word write to a JOG movement device (JOGP, JOGM), communication will not be normal. Information on the SOFTLIMIT OVER error is stored in the RUN Alarm Information device (RUNALM).
- *8 The structure of the address portion of the Point Data device (POINT, POINT_) is as follows.

Point data element

Point number

Point data is data that stores movement information for the axis connected to the Robot Controller. There are 255 point data, and each point data has 12 elements. The address identifying the element is called the "point data element," and the address identifying one of the 255 point data is called the "point number."

Point data element	Description
М	RUN type ^{*1}
Р	Position
S	Speed
AC	Acceleration
DC	Deceleration
Q	Push
ZL	Zone (-) ^{*1}
ZH	Zone (+) ^{*1}
N	Near width ^{*1}
J	Jump ^{*1}
F	Flag ^{*1}
Т	Timer ^{*1}

*1 Non-retentive device (POINT_) is read-only.

e.g. To specify point number 20's Deceleration (DC), use "POINT020.DC."

- *9 Values written to point data's non-retentive device (POINT_) is not written to EEPROM, but to volatile memory. As a result, the value is not retained. If you want to retain the value, in the same point number of the retentive device (POINT), write the operation to the RUN type (M). To use point data's non-retentive devices (POINT_), use External Device software Ver.1.04.106 or later.
- *10 In point data, when you set the RUN type (M) to 0, data in each element becomes invalid. When you reset the RUN type (M), data in each element becomes valid.
- *11 32-bit device.

- *12 Define the point number you want to teach, and perform a word write operation.
- *13 Define the point number you want to delete, and perform a word write operation.
- *14 Communication system parameters K034, K035, K036, K037, K038, and K039 are read-only addresses.
- *15 D03, D05, and D08 are unused devices. On the Display, these devices show a value of 0.
- *16 The structure of address in the Alarm history device (REC) is as follows.

The alarm history device stores the last 50 alarms that have occurred on the External Device. Each alarm has elements such as "Cause," "Position," and "Speed" when the alarm occurred. The address identifying the element is called the "Alarm history element," and the address identifying one of the 50 historical alarms is called "Alarm history number."

The alarm history elements are listed below.

Alarm history element	Description
F	Cause
Т	Total boot time
Р	Position
S	Speed
М	Operation status
N	Operation point
С	elec. current
V	Voltage
I	Input
0	Output

e.g. To specify Alarm history number 10's Position (P), use "REC10.P."

- *17 Text string device. You can define up to 32 single-byte characters.
- *18 Stores RUN Alarm information for External Device operations that occurred on the Display. Even if the run alarm is removed on the External Device, the RUN Alarm information device is not cleared. Clear this information from the Display.

When you perform a new operation on the Display, the RUN Alarm information device is cleared.

NOTE	• Please refer to the GP-Pro EX Reference Manual for system data area.
	Cf. GP-Pro EX Reference Manual "LS Area (Direct Access Method Area)"Please refer to the precautions on manual notation for icons in the table.

0008	Ι	Input
0009	0	Output

8 Error Messages

Error messages are displayed on the screen of Display as follows: "No. : Device Name: Error Message (Error Occurrence Area)". Each description is shown below.

Item	Description
No.	Error No.
Device Name	Name of External Device where error occurs. Device name is a title of External Device set with GP-Pro EX. (Initial value [PLC1])
Error Message	Displays messages related to the error which occurs.
	Displays IP address or device address of External Device where error occurs, or error codes received from External Device.
Error Occurrence Area	 NOTE IP address is displayed such as "IP address (Decimal): MAC address (Hex)". Device address is displayed such as "Address: Device address". Received error codes are displayed such as "Decimal [Hex]".

Display Examples of Error Messages

"RHAA035: PLC1: Error has been responded for device write command (Error Code: 4 [04H])"

NOTE
Refer to your External Device manual for details on received error codes.
Refer to "Display-related errors" in "Maintenance/Troubleshooting Guide" for details on the error messages common to the driver.

Error Messages Unique to External Device

Message ID	Error Message	Description
RHxx128	(Node Name): Attempt was made to enter data that exceeded the specified range	You tried to enter a value that is outside the data range. Check the External Device manual, and write values within the setting range.
RHxx129	(Node Name):Read data exceeded the specified range	You tried to read a value that is outside the range supported by the controller. Check the External Device manual, and read values within the setting range.
RHxx130	(Node Name):Written data exceeded the specified range	You tried to enter a value that is outside the range supported by the controller. Check the External Device manual, and write values within the setting range.
RHxx131	(Node Name):Operation or edit command was executed in Monitor mode	Write command was sent while in Monitor mode. Exit Monitor mode, and then send the write command.

Message ID	Error Message	Description
RHxx132	(Node Name):Operation command was executed during operation	During an axis operation you sent the Operation command. Either wait until the axis operation completes and then send the operation command. Or, stop the axis operation and then send the operation command.
