## 21 Saving Device Data Backup

21.1	Try to Save Device Data Backup	21-2
21.2	Setting Guide	21-5

NO.

## 21.1 Try to Save Device Data Backup

The device data in Device/PLC can be easily backed up with simple settings.

The data subjected to backup is limited to sequential devices, however, you are recommended to use this function for backup or editing the data partially on the occasion of maintenance.

ΓE	•	The data backed up or edited can be stored in Device/PLC. For the procedures, please refer to "22
		Restoring Backup Device Data".

1 Click [Backup Device] from [Tool] on the menu bar.

🂱 Pro-Studio EX test.npx								
File Edit	Tool Programming Assist	Setting Help						
<b>1</b>	Check Consistency Find Node	> ≽ Symbol >> ≷ Feature						
Sample On the sample:	Backup Device Restore Device Save GP Capture Data							
network	<. Backup SRAM Measure Read Time	2-Way Network						
*	Remote Connection Remote Disconnection	2-Way network is a network con in Excel format by acquiring data						
	Set Factory Gateway	connected to the GPs, and transi connection units.						
	n Design	Pro-Studio EX						

2 Set all items in the "Device Backup" screen and click the [Backup] button.

Device Backup								
Read out current values of the specified node and save them.								
Node Name	<b></b>							
Device/PLC	<b></b>							
Device Address	· · · · · · · · · · · · · · · · · · ·							
Backup Number	255							
	Data Format C Bit C 32 Bit C 4 Bit C 5 8 Bit C 64 Bit C 5 8 Bit C 64 Bit C 5 16 Bit C 5							
Save Folder	C.#Program Files#Pro-face#Pro-Server EX#NPXDat Browse							
File Name	%NODE_%DEVICE							
	File Format C BIN C CSV Backup Close							

The "now" screen is displayed, indicating the processing status of backup.

now	
Now saving device data to file.	
07 255: 0%	Cancel

NOTE

• The set contents in the "Device Backup" screen are incorrect, the following message appears:

Message	Required action			
Designate number up to 255 for data backup in the BIT format.	Reset the value in the [Backup Number] in the range of 1 to 255, and then execute backup.			
You cannot execute bit-type symbol backup other than in the BIT format.	If you designated a BIT symbol in the [Device Address] field, you cannot execute backup in formats other than BIT. Reset the format to "BIT", and then execute backup.			
You cannot execute symbol backup other than a bit-type in the BIT format.	If you designated a symbol other than a bit- type in the [Device Address] field, you cannot execute backup in BIT. Reset the format to something else but "BIT", and then execute backup.			
Amount of backup data is incorrect.	Please set up back up data only up to the maximum limit and run backup again. The amount of data you can back up is different depending on the device data type, and so on.			
The specified device is an undefined symbol or an invalid address.	Set up an accessible device address or symbol. Also, set up an acceptable data type and run back up again.			

When the saving process has been completed successfully, the message of "Device backup was successfully completed" appears.

Click the [OK] button to finish the process.

Below are the data contents for CSV device data.

Node name, (Node name for backup)

Device/PLC name (Device/PLC of backup source)

Device name, (Device address to start backup)

Number, (Number of backup data)

Device length, (Bit length of the backup device)

Data type, (one of the following: bit, unsigned decimal, signed decimal, hexadecimal, or string)

Date, (Backup date)

Data, comment

(Value of the first device address), (Name of the first device address)

(Value of the second device address), (Name of the second device address)

**NOTE** • The backup date should be written in a format of "(year)/(month)/(day) (space) (hour):(minute)". Note that if only (minute) shows one digit, use 0 (zero) in the second digit.

- TIME, TIME\_OF\_DAY, DATE, DATE\_AND\_TIME formatted values are stored as binary values.
- For information on displaying as text, refer to '27.8 Binary Date and Time / Text Display Conversion'.

## 21.2 Setting Guide

Device Backup									
Read out current values of the specified node and save them.									
Node Name									
Device/PLC									
Device Address									
Backup Number	255								
	Data Type     Data Format       O Bit     O 32 Bit     O Unsigned Dec       O 8Bit     O 64 Bit     O Signed Dec       O 16 Bit     O String     O Hex								
Save Folder	C:¥Program Files¥Pro-face¥Pro-Server EX¥NPXDat Browse								
File Name	%NODE_%DEVICE								
	File Format © BIN © CSV Backup Close								

Setting item	Setting content				
Node Name	Select the node reading the Device Backup data. The list indicates the nodes registered in the network project file under loading.				
Device/PLC	Select the Device/PLC reading the Device data.				
Device Address	<ul> <li>Enter the leading device address or symbol in the device from which you read the data.</li> <li><b>NOTE</b></li> <li>When you set the [File Format] to [Bin], make sure the file path does not exceed 255 single-byte characters. Backup is not possible if you exceed 255 characters.</li> </ul>				
Backup Number	<ul> <li>Enter the number of backup device.</li> <li>NOTE</li> <li>The maximum number of device that you can backup depends on the device data type.</li> <li>This is automatically set up when you select a symbol in the [Device Address] field.</li> <li>To back up a STRING device, specify the number of bytes to back up.</li> </ul>				
Data Format	<ul> <li>Select the type of saved data.</li> <li>Refer to " Accessible Tag data formats" for accessible tag data formats</li> <li><b>NOTE</b></li> <li>This is automatically set up when you select a symbol in the [Device Address] field.</li> <li>When you set the [Data Type] to [String] and the [Data Format] to [CSV], note the following.</li> <li>The string up to the NULL termination character is backed up.</li> <li>Backup is not possible when the device contains control codes (other than NULL).</li> <li>If the last byte in a device, or the last byte in a range, contains the first byte of a double-byte character, the string up to (but not including) the last byte is backed up.</li> </ul>				
Data notation	When [CSV] is selected on [File Format], set the data notation.				

Setting item	Setting content				
Save Folder	Set the folder that you wish to save file. Click the [Browse] button or enter the folder name directly to select the folder.				
File Name	Enter the file name to be saved. By default, the file name will vary depending on the node name, the device address, the saved type and the data type you select.				
File Format	<ul> <li>Select the data saving format.</li> <li>BIN Save as binary data. Suited for saving large volumes of data. But you cannot confirm or edit the backup data on PC.</li> <li>CSV Save as CSV data. You can confirm or edit the backup data on PC.</li> </ul>				

## Accessible Tag data formats

			Device Size or Tag data format							
		1	8	16	32			64		
		BOOL	BYTE SINT USINT	WORD INT UINT	DWORD DINT UDINT REAL	DATE	TIME	TIME_OF_DAY	DATE_AND_TIME	STRING
fine	Bit	0	х	0 <sup>*1</sup>	0 <sup>*1</sup>	х	х	х	х	х
an dei kup	8 bits	х	0	х	х	х	х	х	х	х
